Blake Chapman - 403-741-8625 (Cell)

BUYER REGISTRATION:

Buyers please register for a buyer number at the office prior to purchasing.

TERMS FOR BULLS:

Cash or cheque payable on Sale Day unless previous arrangements have been made with Chapman Cattle Company.

BREEDING GUARANTEE:

All cattle are sound and right and sell with a "Responsible Breeders Guarantee". All bulls are guaranteed to be structurally sound and to have passed a fertility examination by a licensed Veterinarian. We guarantee satisfaction or we will replace the bull with one of equal value. Should this not be possible, an adjustment will be made to reflect the value of the bull in question or a credit will be given towards the purchase of another bull. All females sell under the terms and conditions in accordance with the Canadian Angus Association.

IDENTIFICATION:

Each animal will carry a CCIA digital frequency tags as well as corresponding Lot tag and tattoo.

DELIVERY ON BULLS:

Upon Settlement, please choose one of the following options and inform the clerk at the time of settlement. Please leave detailed delivery instructions upon doing so.

A. \$100 Discount off of the *Total Invoice* per buyer if bulls are picked up Sale Day

OR -

B. Free Board & Delivery to Central Points

Every attempt will be made to deliver your new bull(s) to your bull pen commencing after the sale and will be done at the expense of Chapman Cattle Company for bulls selling within the Prairie Provinces and BC. All bulls going beyond will be delivered at cost. Chapman Cattle Company assumes no liability of death or injury for bulls returning to the ranch. All bulls MUST be insured.

HEALTH:

All sale bulls have been vaccinated with a Clostridial 8-way, Bovi-Shield Gold FP 5VL5, poured with Ivomec, and will be fertility tested and guaranteed sound.

ANNOUNCEMENTS:

Errors in this catalog will be corrected by announcements from the block at sale time and such corrections will take precedent over any printed material. Any disputes will be settled by the auctioneer.

ACCIDENTS:

Although every precaution will be taken, All Persons who attend the Sale do so at their own risk and the owners, management, and Sale Staff assume no liability, and disclaims all liability, legal or otherwise, for any reason.

CERTIFICATE OF REGISTRY:

A certificate of registration duly transferred will be furnished to the buyer by the breeder for each registered animal after complete and full payment has been made.

– PLEASE NOTE –

***Scrotal Circumferences & Sale Weights available
online and in printed form on Sale Day!***

View Catalogue Online: www.chapmancattle.com

Agricultural Research Service scientists at the Fort Keogh Livestock and Range Research Laboratory (LARRL) in Miles City, Montana have been conducting several studies surrounding cattle production; one of which is designed to make cattle production more efficient.

Reducing production costs hinges on maintaining high rates of reproductive success while reducing use of harvested feeds. A common problem cow-calf producer's face is low rebreeding performance among 2- and 3-year old cows. This occurs when cows' needs for additional nutrients during pregnancy and lactation have not been met. But rather than just feed young cows more, the LARRL scientists are attempting to make them more efficient so they'll need less feed.

According to animal scientist Andrew Roberts and colleagues, heifers they studied developed to reach target weights lower than those traditionally recommended, consumed 27 percent less feed over the winter months, and gained weight more efficiently throughout the post-weaning period and subsequent grazing season. "The strategy of providing less feed may reduce costs of developing each replacement heifer by more than \$31 and extend their life span, with important ramifications for lifetime efficiency and profitability," says Roberts.

"For the last 3 to 4 decades, the mantra has been 'feed them to breed them,' which means providing enough feed during the first year to ensure that young heifers reach puberty to start reproducing," he says. "But our studies indicate this doesn't seem to be optimal in the long run. Our research shows that by feeding to get all the animals bred, you are also propping up the inefficient animals – those that won't consistently produce calves when put in nutrient-limited environments later in life."

In their study, the heifers were divided into two lifetime treatment groups. The control group was fed to industry guidelines; and the restricted group was fed (on a body-weight basis) 80 percent of feed consumed by their control counterparts for 140 days, ending when they were 1 year old. The restricted heifers grew slower and weighed less at any point in time as a consequence of less feed. The actual amount of feed provided to the restricted group over the entire feeding period was about 73 percent of that provided to the controls.

Final pregnancy rates were 87 percent for the restricted heifers and 91 percent for the controls.

From breeding through late fall, the heifers were managed as one group. Each winter, the pregnant animals were again separated into two groups – restricted feed and control. The restricted cows were fed 20 percent less supplemental feed during the winter months than the controls. The scientists predicted that these treatments would allow nature to decide which heifers were reproductively efficient: Less efficient heifers would eventually fail to reproduce and be culled if restricted, whereas feeding more would keep them in production but result in more expense for the producer.

"Early elimination of inefficient breeders allows them to be harvested for the high-quality meat market," says Roberts. Roberts and colleagues also found that restricting the cows at a young age might improve their efficiency throughout the rest of their life.

The restricted-feed study has been ongoing since 2001, and the researchers are now looking at the second generation – those that were born from cows on restricted diets. "An interesting thing occurred: The feed restriction seems to have made the second generation able to withstand restriction with greater efficiency," says Roberts.

In cattle, maximum production (measured by weight of calf at weaning) doesn't peak until 5 years of age. In this study, the proportion of cows that became pregnant each year, and stayed in the herd until age 5 was greatest for restricted cows out of restricted dams. Restricted cows from control-fed dams had the lowest rate of survival to age 5.

The researchers found that the third-generation feed-restricted calves are lighter at birth and at weaning than those calves from cows fed at the industry standard, but the feed-restricted cows themselves are slightly fatter and heavier at the calves' weaning.

"Physiologically, the second-generation restricted cow is conserving some of the nutrients taken in for body reserves, which may result in more efficient reproduction and better survivability in the herd," says Roberts.

The replacement heifers here at Chapman Cattle Co. are treated similar to the LARRL protocol, and I would concur with the findings of Roberts and colleagues. As we continue to pressure these cattle environmentally, the long-term generational efficiencies will not only become more evident within our own cowherd, but will become even more transmissible to our customers via the Forage-tested bulls offered annually through our sale. ***If you are tired of "propping up" inefficient cattle, please join us Thursday, February 14th, in Stettler!***

The Advantages of Forage-Developed Bulls

What is a 100% ‘Forage-Developed Bull’? This is a bull that has been developed and tested for his ability to perform on an all forage (grass/hay) diet. Typically, most bulls are developed and tested on a high concentrate (grain) ration similar to the rations used to fatten cattle in a feedlot. Even claims of a high-roughage diet may not accurately define how that bull has been developed.

It is common knowledge that these hot feedlot rations will negatively affect a bull’s fertility, digestive system and liver function, as well as the soundness of his feet and legs.

It stands to reason, the bulls that perform best in a forage-raised environment should sire cattle that are also more efficient foragers. Therefore, this is a very important economic trait for ranchers who produce their own replacement females to select for.

Chapman Cattle Company started marketing forage-tested bulls in 2006. Why? the reasons are twofold. First, we believed in the basic concept of forage testing our maternal genetics since we were already moving our cowherd towards a grass-based production system. Second, it provided a way for us to market our late spring born bull calves as long yearlings.

The bulls are initially weaned in November where they begin their forage testing. They are roughed through their first winter on mixed hay with little, or no, protein supplement. This stage of development always does an excellent job of “separating the men from the boys”.

The bulls will spend their second summer on an all-grass diet. It’s not uncommon for them to gain over 2 pounds per day during the summer. In October, the bulls come off grass and are weighed. This marks the end of their forage test. Since the bulls are run in large groups, our ratios should accurately reflect their true genetic merit when comparing gain.

Continued next page...

At the end of their forage test, the less efficient and unadapted bulls are culled, as well as those with structural problems. Most of the survivors will be offered for sale in our spring bull sale with a complete breeding soundness guarantee.

Although this program has an extremely high fallout rate, we believe it is the best way to performance test our maternal genetics.

There are several obvious advantages to using older, forage-tested bulls. Since these bulls are older and more mature they are able to handle a heavier workload. Since they are in range condition, in contrast to being overweight, they're able to maintain or gain weight during their first breeding season. Many customers have reiterated testimonials how their Chapman bull was the only bull not to lose condition throughout the breeding season.

Since these bulls have never been confined to smaller pens and/ or forced to eat a high concentrate ration, they will be much healthier and will last much longer. Bull longevity is an extremely important economic trait.

Ultimately, since these bulls have proven their ability to survive and perform in an all-forage environment, they should pass that genetic potential on to their offspring.

CHAPMAN CATTLE COMPANY - Your Source for Forage-Tested Bulls

mThe “100% Forage-Raised” Bull Advantage!

- *More fertile and will cover more cows.*
- *Will continue to gain weight through 1st breeding season.*
- *No bull's feet or legs ruined due to hot feed.*
- *More years service from forage bulls.*
- *Less injuries and breeding problems.*
- *Bulls are more conditioned to the environment.*
- *Bulls have been put through a rigid test.*

Welcome from Castlerock Marketing

Shane Castle

Welcome to Chapman Cattle Co.'s Annual Bull Sale! Yet another great year for the cattle business is on the horizon and we are nowhere near cresting the demand for cattle anytime soon. What makes it great.....strong active prices in all sectors despite the high cost of gain.

The cattle that are delivering the top prices are the good ones. The separation of quality was apparent and further strengthens the need for top quality genetics in all sectors of the industry and quality is what the many repeat customers have become accustomed to with the Chapman bulls.

Customer satisfaction is number one on any business in the quest for getting the most “bang for their buck”. The mission statement of Chapman Cattle Co. is to develop a set of bulls that will supply the commercial industry with bulls that offer calving ease and performance with an eye for replacement females – in other words, “Well balanced cattle that are designed to be well rounded, not lopsided in their traits”. Staying the course has paid off not only in the Chapman herd, but in the many commercial herds that have utilized their genetics. Herdbulls sourced from Sinclair Cattle Co, Coleman and McCumber have only further concentrated the genetic intentions of the Chapman Cattle Co. program.

Consider this your invitation to check out the offering and take advantage of an excellent opportunity to gather ***Two Year Old Angus Bulls!***

Should you have any questions regarding the offering feel free to contact Silas, Blake, any of the sales staff or myself. The “Sight Unseen” option is always there, give us a call and we would be happy to discuss the offering with you!

See you sale day!

9R7 is a high capacity, wide based, thick made bull that is old line Rito, ensuring correctness and functionality. In fact, the dam of his sire traces 19 times to RR Rito 707.

He possesses a classy, masculine beef bull look along

with a wide, deep quarter and excellent scrotal development that he stamps into his sons with authority; yet leaving wedge-shaped, feminine daughters with ample forerib. In fact, some of the best daughters in both type and function at Sinclair Cattle Co. are paternal sisters to 9R7.

Utilize 9R7 sons to add performance, capacity and structural correctness.

A stout and powerful son of OCC Joker 620J, 6172S has proven year after year his ability to sire moderate, efficient, functional cattle ideal for grass utilization. With over 50 daughters currently in production, it is evident they are among the most efficient and productive.

Utilize Joker sons for their maternal potential, favorable carcass traits, and conversion efficiency - proven genetics for any grass-based outfit.

Joker 620J - Sire of 6172

Angus tags are for animals who are the progeny of at least one registered Angus parent. The Canadian Cattle Identification Agency (CCIA) compliant RFID tag assures feedlots and branded Angus beef programs that they have purchased Angus genetics. Under the Canadian Angus Rancher Endorsed program, participants are required to use Angus tagged animals in their beef programs to receive the Canadian Angus Association's endorsement. Tagged cattle are in demand year round, across the country. Tagged cattle are also eligible for special Canadian Angus Rancher Endorsed Fall Feeder Sales each year.

Don't miss out — purchase your Canadian Angus Rancher Endorsed tags today.

Call the
CANADIAN ANGUS ASSOCIATION
 at 1-866-571-8093
 for all your Angus tag needs.

Acquired as the \$11,500 second top-selling bull in the 2009 Sinclair Bull Sale, 8RL5 was a high-capacity, wide-based, thick made bull that was easy fleshing, moderate and exhibited a classic Angus look. 8RL5 sired the lead off sire group in our 2012 bull sale to average \$6100 and left some very valuable daughters. Utilize 8RL5 sons to balance birth weight with growth, while adding extra rib shape and capacity.

A real powerhouse out of a beautiful Tomwall Pied Piper 413 daughter, Equation is the bull Tom Walling believed to be the best cow maker he had ever used. With 40 Equation daughters currently in production here, it is evident they are the right type – lots of capacity, great udders, and extra productive. Equation x Lady Erica 8984 tabulates a very maternal package with longevity & function.

A true maternal calving ease line of cattle, the original 'Waterton' bull originated out of the Saddle Butte program at Geyser, MT and was a unique genetic tool, combining Lodge of Wye (one of only 12 Angus bulls to be proven genetic defect-free) with Emulation 31. Utilize 'Waterton' sons to sire true calving ease, calf vigor, and udder quality without sacrificing growth.

9RT10 is a genetic gem with the maternal heritage to move a cow herd to a whole new level. He is the product of the mating of established Pathfinder sire, Leachman Right Time, and the Pathfinder Donor Dam, N Bar Enchantress 4908, that Tom Elliott and Jeff Ward consider to be their favourite cow from the N Bar foundation who holds a progeny birth ratio of 98 combined with weaning and yearling ratios of 111 and 107 respectively on 9 natural calves and is best known as the dam of the premier female sire, N Bar Shadow X4124.

Utilize 9RT10 sons on cows or heifers to sire exceptional replacement females.

Enchantress 4908

N Bar Shadow

"Sight Unseen Purchase Plan"

We would prefer to have everyone in attendance for sale day, but realistically we know there are scheduling conflicts and distance limitations. Regardless of the situation, we handle many sight-unseen bull purchases every year, and have successfully placed cattle into 6 provinces this way. Almost every one of those original sight-unseen purchases has resulted in repeat orders. In fact, of all the bulls sold sight-unseen, we have only had to bring 1 bull home!

We know the cattle well, and realistically some of our customers prefer to allow us to select their bull power for them. Please contact Silas, Blake, or Shane Castle to discuss your bull requirements –

100% Satisfaction Guaranteed!

026S is a paternal brother to Crowfoot Equation 5793R, who was purchased in-dam from Crowfoot Cattle Co. in '05. His donor dam, Pat Lady Erica 8984, is perhaps the best cow Crowfoot has sold to-date from the original Walling cowherd. She posts a WR/108, YR/110 and is extremely sound as a fifteen year old cow.

Utilize sons of 026S on cows or heifers for their traditional Angus characteristics with built-in calving-ease, longevity, excellent disposition and strong maternal characteristics.

Line-bred Rito, 3R9 transmits muscle and traditional Angus character while moderating frame.

Utilize 3R9 sons to do just that, which is why, in addition to 3R9, we are using 2 sons via Sinclair Memento 8RL5 and Chapman Rito Legacy 218U.

Mature Red Angus Sire

Although black is our predominant color, here are 5 solid Red Angus bulls that really stand down on all four corners. The Bar-E-L sired bulls have lots of testicle, hair, excellent disposition and have a real herd bull look. Not bad for 100% Forage-Developed, and out of true 1250 lb. dams.

The other Red bull is unique in pedigree and type, an embryo resulting from the mating of Lman None Better x Six Mile Lana 322S. 322S was a very good cow originating from Six Mile and would be 28 years old this year. Cherry red in color, he possesses that extra rib in length and an appearance that will certainly catch your eye.

The "100% Forage-Raised" Bull Advantage!

- *More fertile and will cover more cows.*
- *Will continue to gain weight through 1st breeding season.*
- *No bull's feet or legs ruined due to hot feed.*
- *More years service from forage bulls.*
- *Less injuries and breeding problems.*
- *Bulls are more conditioned to the environment.*
- *Bulls have been put through a rigid test.*

To the bidders and buyers and all who participated in our sale in any way, we extend a heartfelt thank you. We know that the success of our business depends upon good customers and we certainly do appreciate your support and wish you every success with your purchases! If you have any questions, please feel free to contact us and, if you are in our area, do stop in. We are proud of our cattle and would be pleased to show you our program.

BW: 94 lbs. WW: 740 lbs. WR: 101 Adj. YW: 1312 YR: 106 SC: 37
IMF: 3.55/110 REA: 12.30/102 FAT: .29/107

"161" is produced from the herd sire producing Pathfinder dam, B Pride 463 of Mc Cumber, who is also the granddam to the \$37,000 high-selling Lot #1 in the 2012 McCumber Angus Bull Sale.

161 is a masculine, muscular beef bull with an abundance of shape to his top, width to his rump, and depth from forerib to flank. He is wide based, smooth shouldered, tight sheathed and posted an ADG of 3.98 lbs/day and earned a 365 day weight of 1312 lbs. to ratio 106. His scan data was solid, as well, with an IMF ratio of 110, and a REA ratio of 102.

His dam has been a consistent producer of pounds and performance while maintaining a spotless record for fertility and productivity. She has a WWR 6@112, YWR 6@108, IMF 6@110, REA @100 and her grand dam was still in production at the age of 18 in TX. B Pride 463 has that ideal wedge shaped look. She is a big bodied cow with plenty of thickness, sound feet and legs, and an udder that should last forever. She has maintained her Pathfinder status since she qualified after 3 calves and was flushed for the first time last spring in order to get more daughters of her into production.

B Pride 463 of Mc Cumber (Dam)

Sinclair Entrepreneur 8R101 (Sire)

There is no guesswork with this one. His dam has not missed. His sire, Entrepreneur, is the result of mating the standard for performance and longevity, Rito 707, with an N-Bar donor still in production at the age of 17.

Phenotypically 161 is impressive, in addition to this he has been bred to be a reliable source of herd building genetics.

Owned with McCumber Angus, Rolette, ND.
