

OLE FARMS

11th Annual **Family Day Sale**

Monday
February 15
2016

At the Farm
10 miles Southwest of
Athabasca, Alberta

Breeding Philosophy

At OLE FARMS our breeding philosophy is simple: breed cattle that give your customers the greatest chance to be profitable. In the North American Cow Calf operation, the largest factors that contribute to profit or loss are winter feeding costs and the % of live calves weaned per cow exposed. These two factors are the two items we spend the most time and effort selecting for. They are, however, antagonistic traits: the less that you feed your cows through the winter the more difficult it is to get them to rebreed the following spring or summer. In order to do our best to accommodate both antagonistic traits we have reduced the frame on our cows and focused on using bulls with exceptional EPDs for Fat which has increased the ability to flesh. This has allowed us to graze pastures into early winter, then move to swath grazing or silage diets, therefore significantly reducing winter feeding costs. The more moderate, easy fleshing cows are able to rebreed under these conditions.

As we all know, having a pregnant cow does not mean she will wean a calf that we can market. The culling of cows that do not wean calves is extremely important as well as culling females that cannot calve on their own or get their calf to suck. Culling cows with poor udders and being very selective when putting herd bulls together helps maintain a great uddered cow herd. Another trait that gets considerable focus is birth weight EPDs. Not only do light birth weights help your live calf percentage, but it also will shorten gestation, leaving just a bit more time for cows to rebreed. The bulls in this year's sale lead the industry in birth weight and calving ease EPDs.

We must always remember what we are selling: BEEF! We spend a great deal of time searching for AI and walking bulls that gain well and that have superior carcass quality. In breeding seed stock cattle we always have our customer in mind and make deliberate decisions related to your profitability. The genetics that we have on offer are sound, fertile, easy fleshing, and are not ruined by over feeding. Ole Farms' philosophy in genetics is not to breed cattle that just look good or that will sell well but rather, cattle that give YOU our customer the building blocks to a very profitable cow herd.

"Sharing in the excitement of Agriculture"

Your Neighbour or Your Accountant

Eleven years ago for our first sale catalogue I said, "Our goal is to help you make money in this business. If our cattle make you more profitable, then we will have succeeded." This continues to be our focus.

We have always stressed the importance of keeping costs low by using swath grazing, bale grazing, pasture management and building a better cow. We are convinced that a moderate framed, fertile cow will produce more pounds of calf per acre and consequently increase our overall profits.

In the 50's and 60's our cow herds were primarily British breeds. In the 70's and 80's we were drawn into the exotic craze. By the 90's many producers started to realize that large frame exotic cattle didn't work. Since then our industry returned to British cattle. The problem is, many of the British cattle, including Angus, are now too big. The average Angus cow is now as heavy as the average Simmental. At Ole Farms our breeding program strives to maintain the attributes that historically made the Angus breed great. Ole Farms is not just a place to buy Angus genetics, it is really your source for the "Right Kind of Angus" cattle: moderate, deep, easy fleshing fertile cattle that have not been pampered.

A lot of producers ask me what I think the market will do. In our 2011 Sale Catalogue I said, "In my opinion, the cattle market in Canada will turn in a manner we have not seen in 35 years."

In 2012, I said, "We are entering an era of historic profitability for the cow-calf sector."

In 2013, I said, "It likely will be at least 4 years before slaughter cattle volumes start to rise and if cow herd rebuilding begins, slaughter volumes will drop even more than now, driving prices to levels never experienced before."

Obviously we have just had two remarkably profitable years, so what say I now?

At this point it would probably be wise to not offer an opinion, however, here goes: North American cow inventories are increasing. The Country of Origin Labelling issue has been resolved and lower calf prices this past fall may slow herd expansion, which will be positive in the long term. Unless there are unforeseen circumstances I am confident that we are entering an era of reduced but good profitability for a minimum of 2 to 3 years, similar to the years 1998 to 2001.

As always the key to remaining profitable is to keep costs low. I believe a well-managed cow-calf operation, given a normal cattle cycle, will be profitable 9 out of 10 years. This is not true for many operations because: #1 - Their cows are too big; #2 - They fail to manage grass properly; #3 - They let costs get out of control.

Research data shows that weaning weight only increases 6 lbs for every 100 lbs of increased cow weight. The cost of feeding these bigger cows far outweighs the value of the extra weaning weights. As a producer you must decide. Do you want to wean slightly bigger calves so you can brag to your neighbour, or do you want to have modest, efficient cows so you can quietly get your accountant to smile?

Thank you for showing interest in our program. Please call if we can be of help.

- Kelly

« 1200 lb. Cow vs 1500 lb. cow »

A 1200 lb. cow will consume approximately the equivalent of 5 lbs. of hay per day less than a 1500 lb. cow. (25.6 lbs. vs 30.6 lbs./day) or to put it another way, if you have feed for 100 1200 lb. cows you will only be able to keep approximately 84 cows weighing 1500 lbs. on the same land base. What will these cows produce?

100 - 1200 lb. cows would produce:	45 steers @ 550 lb. @ \$250.00	\$ 61,875
	45 heifers @ 500 lb. @ \$220.00	49,500
		\$ 111,375

At Ole Farms we would use 3.5 acres per cow to produce this for a gross revenue of \$318/acre.

84 - 1500 lb. cows would produce:	38 steers @ 568 lb. @ \$245.50	\$ 52,989
	38 heifers @ 518 lb. @ \$215.50	42,419
(Assuming 6 lb. weaning weight per 100 lb. of extra cow weight and .25 slide on price)		\$ 95,408

* The **100 head of 1200 lb. cows** will generate **\$15,967** more or **\$159.67/cow** more than the 1500 lb. cow or **\$46/acre** more profit.

*** Each plot of this graph illustrates the relationship between Weaning Weight and Mature Cow Weight on Commercial Cow Calf operations with Range conditions.

In summary, for every 100 lbs. a cow is heavier she only weans 6.07 lbs. more calf

So how much more profitable would you be if you buy a bull that was raised from a 1200 lb. cow versus one from a 1500 lb cow? If a bull only produces 100 offspring in his lifetime and you keep 25 of his heifers as replacements, you could generate an extra \$159/cow less extra variable costs cows on the extra cows (vaccinations, etc.) Let's estimate \$150/cow.

But the bull only contributes 50% of the genetic potential, therefore, 25 cows x 8 years x \$75/year = \$15,000. Besides that moderate cows tend to be more fertile and stay in the herd longer. In other words buying the right bull could make you \$15 000 more profit over time. The best part is that many cattle producers think bigger is better, so you may even get these bulls at the same price or less.

A remarkable value!

SMALLER COWS = LARGER PROFIT

CALVING EASE

Star ratings are the subjective estimate of these young bulls' calving ease

- ★★★★ Likely to have a high level of calving ease based on dam and sire history, actual birth weight, and EPD of birth weight
- ★★★ Should be comfortable for use on heifers of the same breed
- ★★ Bull should be used on cows with limited assists expected
- ★ Bull should only be used on cows - expect high birth weights

A 'small eye spot' has been noted on a few bulls - indicated on lots by *ses

Herd Health Program

- Zoetis Animal Health Program – all cattle have been vaccinated, following Zoetis Animal Health protocols.
- P.I. (Persistently Infected BVD) – all sale bulls are guaranteed BVD/P.I. free. P.I. animals extract huge losses to the cattle industry annually. A thorough vaccination program is essential to prevent P.I. infected animals.
- All sale bulls are virgins.
- All bulls sell with a certified semen test prior to delivery.

Top 10 Reasons

To Buy at Ole Farms

- 1. PROFITABILITY:** At Ole Farms we breed cattle so as to maximize long term profitability. By breeding cattle that are profitable for us, we know they will work for you as well.
- 2. PHENOTYPE:** We strive to produce thick, deep-bodied cattle with lots of capacity. The right kind.
- 3. HARSH ENVIRONMENT:** At Ole Farms we raise cattle in volume with minimal mechanical intervention. We swath graze and bale graze. We are in a high rainfall area. A lot of our pasture is on low land. Pasture and forage volume is good but quality is lower and northern Alberta is significantly colder than many areas in North America. Our cattle are developed under tough conditions. If they work here, they should work on your operation.
- 4. MODERATE FRAME:** Research has shown that pounds of calf weaned per acre can be maximized with moderate cows. On our way to optimizing frame size, we find our cows are shorter, but not lighter.
- 5. CALVING EASE:** We emphasize calving ease. We seldom pull a calf. All cows and heifers are calved in May and June with little supervision. Heifers are only checked once or twice per day.
- 6. FEET AND UDDERS:** We stringently cull cattle for feet and udder problems. If they have a problem they are gone. Udders on our cows are very strong. None of our sale bulls have had their feet trimmed.
- 7. MOTHER NATURE:** We believe Mother Nature is the best judge of cattle. We do not clip our sale cattle. They are in their natural state.
- 8. OVER FEEDING:** We do not hide our cattle behind heavy feed. The bulls in our sale will not be as fat as in other sales and will not melt away when you use them.
- 9. VOLUME:** We raise and sell cattle in volume. We run 1500 cows and don't have time for high maintenance. We will have 1000 purebred cows calving this spring, which is one of the largest Purebred Angus herds in Canada. These purebreds are raised under ranch conditions with no special attention given to them.
- 10. SHARING IN THE EXCITEMENT OF AGRICULTURE:** We encourage you to come and visit, exchange ideas, and share refreshments with us. We have started a PROFIT CENTERED PERFORMANCE GROUP of producers. The goal is to share production and expense data in order to help each other become more profitable. If you are interested, let us know.

Best wishes to you all. If we can be of any help, please call.

Did You Know?

*We artificially inseminated or put embryos in over 1300 head in the summer of 2015.
This extra effort enables us to use some of the best Angus genetics.*

The high selling Bull for \$46,000 in Crowfoot's dispersal. He is incredibly popular because of his growth and maternal traits. Moonshine sons are deep bodied and long made. The most overlooked aspect of the bull is his maternal merit. His daughters are sound productive cows that hold their condition better than any high growth bull I can recall red or black in color. Moonshine daughters have tight udders and small teats and according to the American Red Angus Association Moonshine is in the top 2% of the breed for ME (maintenance energy). We have yet to use a bull that does so many things so well. One of the best Red Angus bulls ever! Semen is extremely limited, expensive and this sale offering will be the last large offering of Moonshine sons anywhere.

Other Moonshine sons we are using are XO Crowfoot 0102X, Red Ole Moonshine 1B, Red Ole Moonshine 46B & Red Ole Moonshine 151A.

A great female maker. Ext is the standard by which all females are measured. Many in the industry refer to a perfect udder as an "EXT Udder". His daughters look after their calves and seem to improve their eye appeal over their lifetime.

Sons and grandsons include: Ole Emulation EXT 626Y, Ole Emulation EXT 630Y, Ole Emulation EXT 354Y, Sinclair Arsenal 9R104, Sinclair Everlast 6R107 & KCF Bennett Total.

50H was our choice of the bulls on offer in the Deboo Production Sale of 2009. 50H is one of the deepest bodied, smoothest moving bulls to have ever walked at Ole Farms. Use of him will improve feet quality, add fleshing ability, and reduce frame score and birth weight. 50H will leave you some of the most attractive and functional females in the industry.

Sons include Ole Fahrens Blaze 347A & Ole Fahrens Blaze 97B

Our largest ever offering of DDA Emblazon 27C. 27C is our standard bearer for producing moderate maternal cattle. He provides two of the things we strive very hard to achieve: fleshing ability and muscle shape. The sons in this year's sale look the part and will fatten quickly on grass.

Thick and deep bodied. Look for 720B to add pounds to his calf crop while keeping birth weights very light. 50H daughters are some of the best females we have ever owned. Here we have a bull that seems to do it all. Weaning index of 119.

A wide bodied bull with added muscle.

Top 10 Management Practices « That Work for Us »

1. Calving in sync with nature – May and June
2. Deep bodied, moderate cows
3. Angus cattle
4. Rotational grazing with adequate rest periods
5. Electric fencing
(The biggest improvement we have made)
6. Swath grazing
7. Alfalfa and Red Clover silage
8. Field feeding - as opposed to pens
9. Bale grazing
10. Pipeline watering

One of the strongest bulls we have ever offered. Deep bodied and extremely wide based. Out of one of our best cow families, his dam has a 107 weaning ratio. The Alliance cattle have mated very well with our OCC influenced cattle.

One of the best bulls in the sale. Extremely wide based with great muscle shape and performance. An interesting set of EPDs with light birth weight and very high marbling. 175B had a weaning index of 110 and his dam has a great production record of 106 lifetime.

An outcross pedigree and a bull with tons of style. 147B has great extension through his head and neck and is very masculine. Loads of performance with a weaning ratio of 121.

A great red carrier bull with added depth and an even better pedigree. His dam has produced one of our very best up and coming bulls, 118Z. Many of his sons will be in next year's sale. 57B himself indexed 115 at weaning and I think you will love the daughters. Often these red carrier bulls get overlooked. Don't miss this guy!

Numerous sons available in 2018!

Calving in sync with nature

EPD Definitions

Expected Progeny Differences

EPDs are an estimation of an animal's breeding value based on its pedigree and performance. EPDs indicate the average performance expected from an animal's progeny in comparison to another animal or to the breed average. They allow for fair comparison of animals' genetics across herds, regardless of environment and management differences.

P = Parental Average EPDs: These are the most basic and least accurate EPDs. They are the best guideline available when calves are first reported and there is no performance data on them yet. Parental Average EPDs are indicated by a P for accuracy and are simply an average of the dam and sire's EPDs. If a calf has only one parent with EPDs, its Parental Average EPDs will be only half of its one parent's EPDs.

P+ = Interim EPDs: These EPDs utilize the Parental Average EPD information on the calf plus any performance data on file and its ratio amongst its contemporary group. Interim EPDs are indicated by a P+ for accuracy and have a higher accuracy than a Parental Average EPD as they also include some performance data.

% = National EPDs: Calculated in the National Cattle Evaluations (NCEs), these EPDs are the most accurate prediction of breeding value or genetic merit that can be determined from pedigree and performance data submitted. National EPDs are published with numerical accuracies that reflect the quantity and quality of data used in its calculation.

Growth EPDs

BW = Birth Weight: Expressed in lbs, predicts on average how much heavier or lighter than the breed average an animal's calves will be. If the breed average is 3 and an Angus animal has a BW EPD of 5 then on average this animal's calves will be 2 lbs heavier than the breed average.

WW = Weaning Weight: Expressed in lbs, predicts comparative progeny weight at 205 days of age. This EPD reflects pre-weaning growth potential that an animal is expected to contribute to its calves.

YW = Yearling Weight: Expressed in lbs, predicts the differences in progeny performance at 365 days. The YW EPD reflects the animal's calves' potential for post-weaning growth.

Fertility Trait EPDs

Milk = Milk: Expressed in lbs. of calf weaned, this is a prediction of an animal's daughter's milking ability.

TM = Total Maternal: A measurement comprised of half of an animal's Milk EPD and half of its additive genetic contribution to its calves' weaning weights.

Stay = Stayability: The probability that a heifer will be retained in a herd past 6 years of age.

HP = Heifer Pregnancy: The probability, in percentage, that an animal's daughters will conceive at 2 years of age.

SC = Scrotal Circumference: This EPD predicts the average scrotal circumference for an animal's sons. Scrotal circumference is used to gauge a bull's fertility.

CED = Calving Ease Direct: Predicts the percentage of unassisted birthings expected from an animal's calves. This EPD reflects a combination of gestational growth and a calf's conformation. The higher the CED EPD, the more likely it is that the animal's calves will be born without assistance.

MCE = Maternal Calving Ease: Predicts the percentage of unassisted births an animal's daughters will have with their first calves. This is a reflection of daughters' pelvic shape and level of hormonal reactions and stamina during labour. The higher the MCE EPD, the more likely it is that the animal's daughters will give birth without assistance.

Carcass Trait EPDs

REA = Rib Eye Area: Expressed in square inches, predicts the size of the rib eye muscle at the 12th rib in the average calf.

Marb = Marbling: A predictor of the level of intramuscular fat in the rib eye muscle, this EPD is calculated using both ultrasound and carcass data.

Fat = Fat: Expressed in inches, predicts the comparative depth of back fat over the 12th rib in the average calf.

YG = Yield Grade: expressed in USDA yield grade score, this EPD predicts differences in carcass yield grade score to be expected from progeny.

CW = Carcass Weight: Expressed in lbs., this EPD predicts differences in the average hot carcass weight in progeny.

Colour Indicators

RC = Red Carrier: a black-hided animal that has inherited the allele that codes for red coat colour but does not display the phenotype as the allele is recessive to the allele that codes for black hide colour

EE – homozygous for black coat color gene

Ee – black hided animal that is a carrier of the red coat color gene

ee – red hided animal

Genetic Evaluation Angus Breed Averages

To evaluate an animal using EPDs it should be compared to the breed average.

This is not zero (0) for any trait, rather, it is an average of all the values for animals of that category in the breed, and changes every evaluation. EPD breed averages are calculated for three categories: non parents under 2 years of age, active dams, and active sires. Below are the current breed averages.

Average Black Angus EPDs / Red Angus EPDs for all CALVES born in 2015

Terms & Conditions

CATTLE INSPECTION: All carry permanent identity tags, corresponding to Sale Lot Numbers. All shall be available for inspection prior to sale.

BREEDING GUARANTEE: All cattle are sound and sold with a responsible breeder guarantee of satisfaction. In the event of any unlikely dispute, the regular terms and conditions, standard with the Canadian Aberdeen Angus Association shall apply.

MAIL BIDS: May be entrusted in complete confidence to any of the Sale Staff listed or to Douglas J. Henderson & Associates Ltd.

INSURANCE: Ownership risk to purchaser commences when the Auctioneer's hammer falls. Livestock coverage will be available at the clerk's desk from the appointed representatives on sale day, also from the sale management at any time.

TERMS OF SALE: Cash or cheque at par, payable to Clerks of the Sale on Sale Day. No release will be given until satisfactory settlement has been made. We reserve the right to withhold animals from shipment for whom payments have not been received prior to departure times.

ALL PERSONS who attend the Sale do so at their own risk, and the Owners, Sale Management and Sale Staff assume no liability, legal or otherwise, for property loss or for any accidents that may occur.
