

OLE FARMS

12th Annual **Family Day Sale**

Monday **February 20** 2017

At the Farm 10 miles Southwest of Athabasca, Alberta

Breeding Philosophy

- Focus on lbs. of calf per acre not lbs. per cow.
- The two most important factors in western Canadian beef production are weaning percentage related to cows exposed to bulls and winter feeding costs. Select for high fertility, calving ease cattle with good maternal merit that are able to graze through the winter and get bred back.
- We don't trim the sale bulls' hair before our sale. We think it is important that you see them in their natural state.
- Our calving assist rate last year was 1 per 500. If you want to make money, it is best to start with a live calf.
- A 3 month grain harvest is sure to remind you how much you love the cattle business.
- Our bulls' feet have not been trimmed.
- Our industry is far too focused on production. We should be focused on profit.
- Our bulls are not —
Pushed — Pampered — or Picked over

COVER BULLS

"Sharing in the excitement of Agriculture"

Family Day Sale

Welcome to Ole Farms

Each year we do a write up explaining how the genetics we offer are likely to make you more profitable. After doing this year's write up I looked back at what we wrote in our first Family Day Sale.

An excerpt from the inaugural 2006 Family Day Sale:

“ In our program we need cows that are deep, thick, easy fleshing and have sound feet and udders. These mommas must have longevity and raise a calf every year, and most importantly, as feed constitutes our largest cost, our cows must be able to maintain themselves on a modest diet. We use swath grazing for winter feeding and don't expect to feed silage more than 60 days per year. And, the purebred cows aren't treated any differently from the commercials. It is our opinion that purebreds that need to be pampered are not useful to the commercial operation. ”

Kelly & Anna Olson

What we wrote years ago has not changed. We are still striving to produce long lasting, low maintenance cattle that make us more money. Years ago just like today we need moderate milk, moderate frame and cattle that will be able to graze through the winter and still rebreed the following summer.

There is one thing that has changed. When we started this endeavor of producing seed stock genetics for profit centered commercial cattlemen, there were very few of you raising cattle like many of you are today. Twelve years ago there were far more rainbow colored exotic herds that were winter calving. Most were feeding over 200 days per year and in doing so were high cost operations.

Today as you drive along the countryside there is herd after herd out grazing well into the winter months (and not just because they didn't get their crop off either). Cattlemen are getting a handle on their costs and have changed management practices in order to become more competitive.

While some of you have been low cost producers for generations, most have made the change in the last decade. You have started working with mother nature and used genetics that remained productive with reduced inputs. These low cost producers made it through BSE. You were profitable, bought more land and cows. You came back to our sale and bought more bulls. Your success has enabled us to be successful too and we thank you for it.

See you February 20th!

- The Olsons

Top 10 Reasons To Buy at Ole Farms

- 1. PROFITABILITY:** At Ole Farms we breed cattle so as to maximize long term profitability. By breeding cattle that are profitable for us, we know they will work for you as well.
- 2. PHENOTYPE:** We strive to produce thick, deep-bodied cattle with lots of capacity. The right kind.
- 3. HARSH ENVIRONMENT:** At Ole Farms we raise cattle in volume with minimal mechanical intervention. We swath graze and bale graze. We are in a high rainfall area. A lot of our pasture is on low land. Pasture and forage volume is good but quality is lower and northern Alberta is significantly colder than many areas in North America. Our cattle are developed under tough conditions. If they work here, they should work on your operation.
- 4. MODERATE FRAME:** Research has shown that pounds of calf weaned per acre can be maximized with moderate cows. On our way to optimizing frame size, we find our cows are shorter, but not lighter.
- 5. CALVING EASE:** We emphasize calving ease. We seldom pull a calf. All cows and heifers are calved in May and June with little supervision. Heifers are only checked once or twice per day.
- 6. FEET AND UDDERS:** We stringently cull cattle for feet and udder problems. If they have a problem they are gone. Udders on our cows are very strong. None of our sale bulls have had their feet trimmed.
- 7. MOTHER NATURE:** We believe Mother Nature is the best judge of cattle.
- 8. OVER FEEDING:** We do not hide our cattle behind heavy feed. These cows are in good working condition.
- 9. VOLUME:** We raise and sell cattle in volume. We run 1500 cows and don't have time for high maintenance. We calved 1000 purebred cows this spring, which is one of the largest Purebred Angus herds in Canada. These purebreds are raised under ranch conditions with no special attention given to them.
- 10. SHARING IN THE EXCITEMENT OF AGRICULTURE:** We encourage you to come and visit, exchange ideas, and share refreshments with us. We have started a PROFIT CENTERED PERFORMANCE GROUP of producers. The goal is to share production and expense data in order to help each other become more profitable. If you are interested, let us know.

Best wishes to you all. If we can be of any help, please call Kelly 780-675-4664

Did You Know?

*We artificially inseminated 1195 head in the summer of 2016.
This extra effort enables us to use some of the best Angus genetics.*

The \$42,000 bull bought out of the Crowfoot dispersal. Simply put the best bull we have ever used in our Red program. 0102X has been able to accomplish things like no other. Starting from the ground up he has excellent foot structure and adequate flex to his pasterns. He has a traditional Angus skull and is very wide based with a strong top. He is loaded with muscle through his hip, lower quarter and stifle. 0102X daughters have become beautiful cows with marvellous udders and hold their flesh like few we have used before. 0102X keeps his daughters moderate framed but yet have exceptional growth and carcass merit.

A new bull for our program that will significantly increase growth without increasing frame score. Resource daughters are easy fleshing high indexing cows that transmit a ton of muscle and mass. We have used few bulls in our program that are over 100 yearling weight EPD because of their daughters' inability to rebreed under our strenuous environment. At this point it looks like Resource will be the exception to the rule because of his easy fleshing ability and high back fat.

A long standing AI sire here at Ole Farms. For the past 6 years 27C has had a large role in our genetic program because he has been such a complete bull. His daughters hold their flesh, breed back early and have top notch udders. His sons have sold incredibly well through our sales because of their depth of body and excellent muscle shape. This fall we placed another large order of semen on 27C, so he will continue to add to our program over the next decade.

CALVING EASE

Star ratings are the subjective estimate of these young bulls' calving ease

- ★★★★ Likely to have a high level of calving ease based on dam and sire history, actual birth weight, and EPD of birth weight
- ★★★ Should be comfortable for use on heifers of the same breed
- ★★ Bull should be used on cows with limited assists expected
- ★ Bull should only be used on cows - expect high birth weights

A 'small eye spot' has been noted on a few bulls - indicated on lots by *ses

Herd Health Program

- Zoetis Animal Health Program – all cattle have been vaccinated, following Zoetis Animal Health protocols.
- P.I. (Persistently Infected BVD) – all sale bulls are guaranteed BVD/P.I. free. P.I. animals extract huge losses to the cattle industry annually. A thorough vaccination program is essential to prevent P.I. infected animals.
- All sale bulls are virgins.
- All bulls sell with a certified semen test prior to delivery.

A definite curve bender here. Starting out these red carrier bulls with a bull that had a BW ratio of 79 (64 lbs.) and a weaning index of 148 which was the largest in 2015 born calves. He is deep bodied and very attractive. This cross between 0102X and Ole Oscar influence cattle has really worked well.

A great bull here with calving ease and performance blended into a very attractive package. Use on heifers with ease and add a touch of frame to your calves.

A very rare find. 400C is extremely easy calving with a 122 weaning index. His dam is a beautiful cow with a lifetime production index of 105. 64R has a moderate frame which makes her lifetime weaning index even more impressive.

Very powerful tank of a bull in 688C. Look for him to push down the scales while his daughters will maintain their flesh through winter grazing. Out of a great cow family with his dam indexing 111 over her first 6 calves! 688C himself has a weaning index of 113.

Very outcross pedigree here as both parents are black. 197M was a long lasting productive cow here with a perfect udder. 801C will add capacity and ease of fleshing to his calves.

EPD Definitions

Expected Progeny Differences

EPDs are an estimation of an animal's breeding value based on its pedigree and performance. EPDs indicate the average performance expected from an animal's progeny in comparison to another animal or to the breed average. They allow for fair comparison of animals' genetics across herds, regardless of environment and management differences.

P = Parental Average EPDs: These are the most basic and least accurate EPDs. They are the best guideline available when calves are first reported and there is no performance data on them yet. Parental Average EPDs are indicated by a P for accuracy and are simply an average of the dam and sire's EPDs. If a calf has only one parent with EPDs, its Parental Average EPDs will be only half of its one parent's EPDs.

P+ = Interim EPDs: These EPDs utilize the Parental Average EPD information on the calf plus any performance data on file and its ratio amongst its contemporary group. Interim EPDs are indicated by a P+ for accuracy and have a higher accuracy than a Parental Average EPD as they also include some performance data.

% = National EPDs: Calculated in the National Cattle Evaluations (NCEs), these EPDs are the most accurate prediction of breeding value or genetic merit that can be determined from pedigree and performance data submitted. National EPDs are published with numerical accuracies that reflect the quantity and quality of data used in its calculation.

Growth EPDs

BW = Birth Weight: Expressed in lbs, predicts on average how much heavier or lighter than the breed average an animal's calves will be. If the breed average is 3 and an Angus animal has a BW EPD of 5 then on average this animal's calves will be 2 lbs heavier than the breed average.

WW = Weaning Weight: Expressed in lbs, predicts comparative progeny weight at 205 days of age. This EPD reflects pre-weaning growth potential that an animal is expected to contribute to its calves.

YW = Yearling Weight: Expressed in lbs, predicts the differences in progeny performance at 365 days. The YW EPD reflects the animal's calves' potential for post-weaning growth.

Fertility Trait EPDs

Milk = Milk: Expressed in lbs. of calf weaned, this is a prediction of an animal's daughter's milking ability.

TM = Total Maternal: A measurement comprised of half of an animal's Milk EPD and half of its additive genetic contribution to its calves' weaning weights.

Stay = Stayability: The probability that a heifer will be retained in a herd past 6 years of age.

HP = Heifer Pregnancy: The probability, in percentage, that an animal's daughters will conceive at 2 years of age.

SC = Scrotal Circumference: This EPD predicts the average scrotal circumference for an animal's sons. Scrotal circumference is used to gauge a bull's fertility.

CED = Calving Ease Direct: Predicts the percentage of unassisted birthings expected from an animal's calves. This EPD reflects a combination of gestational growth and a calf's conformation. The higher the CED EPD, the more likely it is that the animal's calves will be born without assistance.

MCE = Maternal Calving Ease: Predicts the percentage of unassisted births an animal's daughters will have with their first calves. This is a reflection of daughters' pelvic shape and level of hormonal reactions and stamina during labour. The higher the MCE EPD, the more likely it is that the animal's daughters will give birth without assistance.

Carcass Trait EPDs

REA = Rib Eye Area: Expressed in square inches, predicts the size of the rib eye muscle at the 12th rib in the average calf.

Marb = Marbling: A predictor of the level of intramuscular fat in the rib eye muscle, this EPD is calculated using both ultrasound and carcass data.

Fat = Fat: Expressed in inches, predicts the comparative depth of back fat over the 12th rib in the average calf.

YG = Yield Grade: expressed in USDA yield grade score, this EPD predicts differences in carcass yield grade score to be expected from progeny.

CW = Carcass Weight: Expressed in lbs., this EPD predicts differences in the average hot carcass weight in progeny.

Colour Indicators

RC = Red Carrier: a black-hided animal that has inherited the allele that codes for red coat colour but does not display the phenotype as the allele is recessive to the allele that codes for black hide colour

EE - homozygous for black coat color gene

Ee - black hided animal that is a carrier of the red coat color gene

ee - red hided animal

Genetic Evaluation Angus Breed Averages

To evaluate an animal using EPDs it should be compared to the breed average.

This is not zero (0) for any trait, rather, it is an average of all the values for animals of that category in the breed, and changes every evaluation. EPD breed averages are calculated for three categories: non parents under 2 years of age, active dams, and active sires. Below are the current breed averages.

PLEASE NOTE: Red Angus EPDs CANNOT be compared to Black Angus EPDs. The numbers are calculated in separate and unrelated genetic evaluations.

Happy Family Day!

Terms & Conditions

CATTLE INSPECTION: All carry permanent identity tags, corresponding to Sale Lot Numbers. All shall be available for inspection prior to sale.

BREEDING GUARANTEE: All cattle are sound and sold with a responsible breeder guarantee of satisfaction. In the event of any unlikely dispute, the regular terms and conditions, standard with the Canadian Aberdeen Angus Association shall apply.

MAIL BIDS: May be entrusted in complete confidence to any of the Sale Staff listed or to Douglas J. Henderson & Associates Ltd.

INSURANCE: Ownership risk to purchaser commences when the Auctioneer's hammer falls. Livestock coverage will be available at the clerk's desk from the appointed representatives on sale day, also from the sale management at any time.

TERMS OF SALE: Cash or cheque at par, payable to Clerks of the Sale on Sale Day. No release will be given until satisfactory settlement has been made. We reserve the right to withhold animals from shipment for whom payments have not been received prior to departure times.

ALL PERSONS who attend the Sale do so at their own risk, and the Owners, Sale Management and Sale Staff assume no liability, legal or otherwise, for property loss or for any accidents that may occur.
