8th Annual
Family Day Sale

Monday February 18 2013

At the Farm, 10 miles Southwest of Athabasca, Alberta

A Tale of Three Cows

This past year we lost Anna's dad, Louis Salé, at the age of 86. Forty years ago he had a very good herd of commercial Black Angus cattle. Anna may have been somewhat jealous of my time spent with Louis looking at his cows, when I supposedly had come to take her on a date. After years of touring to see cattle, she has become used to the idea.

When Anna and I were married in 1973, Anna brought with her 3 bovines: a black white faced cow and her 2 calves. The black baldie cow was a 3 year old Hereford/Angus cross, weighing about 1200 pounds. The first calf was a straight black yearling heifer from a black Angus sire, and her second calf was a blue roan heifer calf that was the result of a Charolais sire. (Perhaps the roan came from Shorthorn way back in Louis's herd). When Louis brought them over he was very proud of the Char X calf and apologized about the rather small yearling black heifer. All three were added to our cow herd.

At maturity the straight black cow was about 1000 pounds, 200 pounds lighter than her mother, the black baldie. Her sister, the blue roan was a very impressive 1700 pounds. How did these cows perform? The small black cow calved every year, having a very small, 60 pound calf and weaning a respectable 500 pound calf. Her mother, the black baldie also regularly weaned a calf about the same size. The impressive blue roan cow weaned a larger calf, perhaps 550 pounds, and she did it consistently every SECOND year. As exotic cattle were the rage and she was so impressive to look at, we kept giving her a second chance.

I learned more from these three cows than any others we have owned, and they were instrumental in formulating the philosophy at OLE FARMS. Thank you, Louis.

Many of us got caught up in the exotic craze. But after at least a generation, we have come full circle. Think back 10 years to your neighbours' cattle herds. The large frame exotic cattle farms and ranches have either gone out of business or have started using British bulls, and these are mostly Angus. Why has this happened? Firstly, when Cargill began processing cattle in Alberta they increased the demand for Angus cattle because of their carcass advantage over other breeds and the success of Certified Angus Beef. Secondly, cow-calf operators began to realize that they could wean more pounds of calf per acre with moderate frame Angus cattle - not more pounds per cow, but more pounds per acre. Tough economic times as a result of BSE and higher feed costs accentuated that realization.

Unfortunately, as a result of the exotic rage a lot of British Purebred breeders tried to emulate the exotic breeds, resulting in a lot of Angus cattle that are larger framed and harder doing than they should be.

At OLE FARMS we believe a cow must be of moderate frame, have depth of body and lots of capacity in order to be profitable. She must live long and wean a calf every year. Most importantly, she must be easy fleshing. If she needs a lot of mechanical intervention for survival, profitability will be lost. Our entire philosophy at OLE FARMS is to produce profitable cattle. By developing cattle that work in our operation we feel confident they will work on yours.

Today we are at an ideal stage in the cattle cycle. Those of us who hung onto the cow's tail are being well served and the future looks bright. The North American Cow herd numbers are as low as they have been in decades. I am confident our cow-calf operations will be very profitable for a number of years, especially for those with efficient mother cows. Remember the Tale of the Three Cows.

Come on out to the farm February 18th. Enjoy the day.

"Sharing in the excitement of Agriculture"

Breeding Philosophy

At OLE FARMS our breeding philosophy is simple: breed cattle that give your customers the greatest chance to be profitable. In the North American Cow Calf operation, the largest factors that contribute to profit or loss are winter feeding costs and the % of live calves weaned per cow exposed. These two factors are the two items we spend the most time and effort selecting for. They are, however, antagonistic traits: the less that you feed your cows through the winter the more difficult it is to get them to rebreed the following spring or summer. In order to do our best to accommodate both antagonistic traits we have reduced the frame on our cows and increased the ability to flesh. This has allowed us to graze pastures into early winter, then move to swath grazing or silage diets with a large component of the ration being straw, therefore significantly reducing winter feeding costs. The more moderate, easy fleshing cows are able to rebreed under these conditions.

As we all know, having a pregnant cow does not mean she will wean a calf that we can market. The culling of cows that do not wean calves is extremely important as well as culling females that cannot calve on their own or get their calf to suck. Culling cows with poor udders and being very selective when putting herd bulls together helps maintain a great uddered cow herd. Another trait that gets considerable focus is birth weight EPDs. Not only do light birth weights help your live calf percentage, but it also will shorten gestation, leaving just a bit more time for cows to rebreed. The average EPD on the bulls in this year's sale is one full pound under the breed average.

We must always remember what we are selling: BEEF! We spend a great deal of time searching for AI and walking bulls that gain well and that have superior carcass quality. In breeding seed stock cattle we always have our customer in mind and make deliberate decisions related to your profitability. The genetics that we have on offer are sound, fertile, easy fleshing, and are not ruined by over feeding. Ole Farms' philosophy in genetics is not to breed cattle that just look good or that will sell well, but rather, cattle that give YOU, our customer, the building blocks to a very profitable cow herd.

TOP 10 REASONS TO BUY AT OLE FARMS

1. **Profitability:** At Ole Farms we breed cattle so as to maximize long term profitability. By breeding cattle that are profitable for us, we know they will work for you as well.
2. **Phenotype:** We strive to produce thick, deep-bodied cattle with lots of capacity. The right kind.
3. **Harsh Environment:** At Ole Farms we raise cattle in volume with a minimum of mechanical intervention. We swath graze and bale graze. We are in a high rainfall area. A lot of our pasture is on low land. Pasture and forage volume is good but quality is lower and northern Alberta is significantly colder than many areas in North America. Our cattle are developed under tough conditions. If they work here, they should work on your operation.
4. **Moderate Frame:** Research has shown that pounds of calf weaned per acre can be maximized with moderate cows. On our way to optimizing frame size, we find our cows are shorter, but not lighter.
5. **Calving Ease:** We emphasize calving ease. We seldom pull a calf. All cows and heifers are calved in May and June with little supervision. Heifers are only checked once or twice per day.
6. **Feet and Udders:** We stringently cull cattle for feet and udder problems. If they have a problem they are gone. Udders on our cows are very strong. None of our sale bulls have had their feet trimmed.
7. **Mother Nature:** We believe Mother Nature is the best judge of cattle. We do not clip our sale cattle. They are in their natural state.
8. **Over Feeding:** We do not hide our cattle behind heavy feed. The bulls in our sale will not be as fat as in other sales and will not melt away when you use them.
9. **Volume:** We raise and sell cattle in volume. We run 1600 cows and don't have time for high maintenance. We understand what it takes to raise efficient cattle. We were pleased to learn that we are the largest Purebred Angus breeder in Alberta and have the second largest Purebred Angus herd in Canada, based on almost 600 registrations last year.
10. **Sharing in the excitement of Agriculture:** We encourage you to come and visit, exchange ideas, and share refreshments with us. In the next year we would like to start a PROFIT CENTERED PERFORMANCE GROUP of producers. The goal would be to share production and expense data in order to help each other become more profitable. If you are interested, let us know.

Best wishes to you all. If we can be of any help, please call.

Remembering Louis J. Salé

We mourn the loss of Anna's father, Louis Salé, who passed away January 10, 2012. Married to Betty and father to 5 children, he has left a farming legacy for his family. Louis was active in the Lion's Club, Chamber of Commerce, curling, and the Catholic Church. He farmed for all of his working years North East of Athabasca 6 miles, and his daughter and son-in-law, Bernadine and Garth Farrell farm it still.

He was an inventive and creative man, and fashioned many cherished pieces of furniture and gifts from wood. He restored antique cars and trucks as a hobby and very much appreciated the outdoors. He was recognized as a good farmer, raising crops, hogs and cattle. While dating Anna, Kelly noted that he had an exceptional herd of the right kind of Angus cattle.

At this time we pay tribute to him . . .

Congratulations!

OLE FARMS would like to congratulate the Taillieus from Tomahawk Ranch on receiving the Alberta Farm Stewardship Award. The Taillieus are long time customers of Ole Farms, purchasing both bulls and bred heifers. We thank you for your business and congratulate you on your award!

Did You Know?

In 2012 we synchronized over 775 head to artificially inseminate or to implant embryos. This was just less than 3000 times through the chute. This extra work enables us to use some of the best Angus genetics on the planet.

Check out YouTube and search "OLE FARMS BULL SALE"

Videos of select bulls will be available.

If you have any questions or issues finding the bulls, please call Travis at 780-689-8324 or email us at info@olefarms.com and we will send you a direct link.

We started using Alliance in 2001 and in the past 11 years have used 615 straws of semen. Sitz Alliance is one of the few bulls in the history of the breed that balances two antagonistic traits so well – productivity and fertility. There are so few bulls that combine the growth attributes of Alliance, have daughters that bring in the heaviest calves and yet rebreed. Take this opportunity to purchase a son as we have very little semen left on this pathfinder sire.

Ole's Oscar is the foundation bull of our Red Angus program! No other bull has left a larger imprint at Ole farms than Oscar! Oscar is one of very few bulls in the breed where the calves are born light at birth, wean off heavy and have above average muscle shape! Oscar daughters are extremely feminine cows with good feet and picture perfect udders! Ole's Oscar has been the #1 sire in Canada for registrations and is currently ABS's (largest semen company in the world!) #1 selling Red Angus bull in 2009, 2010 and 2011! There is very little semen available in the Canadian marketplace so come and find a son, grandson or great grandson!

Calving Ease

Star ratings are the subjective estimate of these young bulls' calving ease

- ★★★★ Likely to have a high level of calving ease based on dam and sire history, actual birth weight, and EPD of birth weight
- ★★★ Should be comfortable for use on heifers of the same breed
- ★★ Bull should be used on cows with limited assists expected
- ★ Bull should only be used on cows - expect high birth weights

Bovi-Shield GOLD FP
 Protection without compromise.

100% BVD PI-FREE GUARANTEED

OUR BVD PI-FREE GUARANTEE
 If you vaccinate the dams according to label directions with Bovi-Shield GOLD FP purchased from a Canadian Veterinarian, Pfizer will cover the cost of any BVD PI calf born to the vaccinated cows.

Herd Health Program

- Pfizer Gold Program – all cattle have been vaccinated, following the Pfizer Gold program.
- P.I. (Persistently Infected BVD) – all sale bulls are guaranteed BVD/P.I. free. P.I. animals extract huge losses to the cattle industry annually. A thorough vaccination program is essential to prevent P.I. infected animals.
- All sale bulls are virgins.
- All bulls sell with a certified semen test prior to delivery.

Calving Ease ★★

377Y, a 3/4 brother to Lot 1, is a very powerful performance bull. The mating between Alliance and Survivor really seems to work, judging by the first two bulls in this years' sale.

At Ole Farms we believe in breeding for reliability and predictability. Born in 1967 RR Rito 707 has given us just that. Every single black, home raised bull in this sale traces back to this breed legend. Also 73% of the red bulls carry 707 in their blood as well.

*Ole Farms will keep the bulls until delivery,
starting March 15th, at no cost*

This is our first set of sons of the bull we call E3I. It turns out that they were well worth the wait. 321Y is deep bodied, wide based and just how we like them here. Expect to see many more sons like this great rascal over the years. We are expecting great things from his sire.

Calving Ease ★★★

Very long bodied and heavy muscled. He covers a great spread between birth weight and yearling weight with an outstanding maternal pedigree - Alliance, Extra 4x13 and Payoff. With a light birth weight, great performance, great carcass, and out of a great maternal pedigree - what more could you want?

Calving Ease ★★

A very special opportunity here at Ole Farms. An opportunity to buy a Jumbo 1B son. We purchased these 3 Jumbo sons at Remington's dispersal as calves. 522 is a special calf with added middle and power, out of a straight Canadian pedigree. Outcross and Good!

Calving Ease ★★

We at Ole Farms have always been very high on using population genetics to help us find what really works when breeding cattle. The cross between Ole's Oscar and Crossbow really has worked well, as you can see. 111Y is the first of eight 3/4 siblings. 111Y is deep and powerful - maternal and sound.

Calving Ease ★★

One of our very favorites as these young bulls have been developed. Extremely capacious and extra wide. One of the best maternal pedigrees in the sale. Rito 707, EXT, Alliance twice, and best of all, Glad Wall Pattie Queen that produced here until the age of fifteen. Breeders take a look here if you want to make great cows!

Calving Ease ★★★★★

One of the favorite moderate bulls in this years' offering. He has a very moderate frame and should work well on heifers. Deep and thick and out of a tested dam who at seventeen is still producing and looks like most five year olds. Time tested genetics on both sides of this pedigree!

 Possibly the best son of a breed legend. Son of the one time leading bull in the Canadian Angus Association Ole Oscar. 717Y is long spined and made right. With Rambler 1000 and Right Time in the pedigree look for this blood red herd bull to raise sons who will gain and daughters you will love to own. Don't miss your chance on a real herd bull.

Calving Ease ★★★

This bull really should be named "Deep Body". 41/97 is a bull that breeds capacity into his offspring. That, combined with 6595 twice, and you have all the capacity one could want!

Possibly the best phenotype in the sale. Clean fronted, heavy muscled with width, depth and length. This is the reason we take on the extra work of using embryo programs.

DUSTY

Registered AQHA
Palomino Gelding

Dusty is an 8 year old registered AQHA palomino gelding that stands 15.1 hh, and 1100 lbs. He is extremely laid back, gentle and does not get excited. He has been used extensively on Black Bear Community Pasture, and OLE Farms.

BUSTER

Registered AQHA Buckskin Gelding

Buster is a 6 year old registered AQHA buckskin gelding, 15.2 hh, & 1200 lbs. He has been used at Black Bear Community Pasture, and OLE Farms. He has also been rode in the mountains. Buster is easy to catch, likes to work and takes on any job with enthusiasm.

Expected Progeny Differences

An estimation of an animal's breeding value based on its pedigree and performance. EPDs indicate the average performance expected from an animal's progeny in comparison to another animal or to the breed average. They allow for fair comparison of animals' genetics across herds, regardless of environment and management differences.

P = Parental Average EPDs: These are the most basic and least accurate EPDs. They are the best guideline available when calves are first reported and there is no performance data on them yet. Parental Average EPDs are indicated by a P for accuracy and are simply an average of the dam and sire's EPDs. If a calf has only one parent with EPDs, its Parental Average EPDs will be only half of its one parent's EPDs.

P+ = Interim EPDs: These EPDs utilize the Parental Average EPD information on the calf plus any performance data on file and its ratio amongst its contemporary group. Interim EPDs are indicated by a P+ for accuracy and have a higher accuracy than a Parental Average EPD as they also include some performance data.

% = National EPDs: Calculated in the National Cattle Evaluations (NCEs), these EPDs are the most accurate prediction of breeding value or genetic merit that can be determined from pedigree and performance data submitted. National EPDs are published with numerical accuracies that reflect the quantity and quality of data used in its calculation.

Growth EPDs

BW = Birth Weight: Expressed in lbs, predicts on average how much heavier or lighter than the breed average an animal's calves will be. If the breed average is 3 and an Angus animal has a BW EPD of 5 then on average this animal's calves will be 2 lbs heavier than the breed average.

WW = Weaning Weight: Expressed in lbs, predicts comparative progeny weight at 205 days of age. This EPD reflects pre-weaning growth potential that an animal is expected to contribute to its calves.

YW = Yearling Weight: Expressed in lbs, predicts the differences in progeny performance at 365 days. The YW EPD reflects the animal's calves' potential for post-weaning growth. Fertility Trait EPDs

Milk = Milk: Expressed in lbs. of calf weaned, this is a prediction of an animal's daughter's milking ability.

TM = Total Maternal: A measurement comprised of half of an animal's Milk EPD and half of its additive genetic contribution to its calves' weaning weights.

Stay = Stayability: The probability that a heifer will be retained in a herd past 6 years of age.

HP = Heifer Pregnancy: The probability, in percentage, that an animal's daughters will conceive at 2 years of age.

SC = Scrotal Circumference: This EPD predicts the average scrotal circumference for an animal's sons. Scrotal circumference is used to gauge a bull's fertility.

CE = Calving Ease Direct: Predicts the percentage of unassisted birthings expected from an animal's calves. This EPD reflects a combination of gestational growth and a calf's conformation. The higher the CED EPD, the more likely it is that the animal's calves will be born without assistance.

MCE = Maternal Calving Ease: Predicts the percentage of unassisted births an animal's daughters will have with their first calves. This is a reflection of daughters' pelvic shape and level of hormonal reactions and stamina during labour. The higher the CEM EPD, the more likely it is that the animal's daughters will give birth without assistance.

Carcass Trait EPDs

REA = Rib Eye Area: Expressed in square inches, predicts the size of the rib eye muscle at the 12th rib in the average calf.

Marb = Marbling: A predictor of the level of intramuscular fat in the rib eye muscle, this EPD is calculated using both ultrasound and carcass data.

Fat = Fat: Expressed in inches, predicts the comparative depth of back fat over the 12th rib in the average calf.

YG = Yield Grade: expressed in USDA yield grade score, this EPD predicts differences in carcass yield grade score to be expected from progeny.

CW = Carcass Weight: Expressed in lbs., this EPD predicts differences in the average hot carcass weight in progeny.

Colour Indicators

RC = Red Carrier: a black-hided animal that has inherited the allele that codes for red coat colour but does not display the phenotype as the allele is recessive to the allele that codes for black hide colour

EE – homozygous for black coat color gene

Ee – black hided animal that is a carrier of the red coat color gene

ee – red hided animal

Genetic Evaluation Angus Breed Averages

To evaluate an animal using EPDs it should be compared to the breed average.

This is not zero (0) for any trait, rather, it is an average of all the values for animals of that category in the breed, and changes every evaluation. EPD breed averages are calculated for three categories: non parents under 2 years of age, active dams, and active sires. Below are the breed averages for Fall 2012.

Average Black Angus EPDs for all Calves born in 2011
Average Red Angus EPDs for all Calves born in 2011

Terms & Conditions

CATTLE INSPECTION: All carry permanent identity tags, corresponding to Sale Lot Numbers. All shall be available for inspection prior to sale.

BREEDING GUARANTEE: All cattle are sound and sold with a responsible breeder guarantee of satisfaction. In the event of any unlikely dispute, the regular terms and conditions, standard with the Canadian Aberdeen Angus Association shall apply.

MAIL BIDS: May be entrusted in complete confidence to any of the Sale Staff listed or to Douglas J. Henderson & Associates Ltd.

INSURANCE: Ownership risk to purchaser commences when the Auctioneer's hammer falls. Livestock coverage will be available at the clerk's desk from the appointed representatives on sale day, also from the sale management at any time.

TERMS OF SALE: Are cash or cheque at par, payable to Clerks of the Sale on Sale Day. No release will be given until satisfactory settlement has been made. We reserve the right to withhold animals from shipment for whom payments have not been received prior to departure times.

ALL PERSONS who attend the Sale do so at their own risk, and the Owners, Sale Management and Sale Staff assume no liability, legal or otherwise, for property loss or for any accidents that may occur.
