Prairielane Dispersal

We would like to extend an invitation to all our many friends and acquaintances from both the purebred and commercial circles of this great beef industry to the Prairielane dispersal sale on Saturday October 13th at the Heartland Auction Mart in Virden Manitoba.

Since 1921 purebred Angus have played a large part of our families farming operation. In the 75 years plus, it has always been our goal to improve the Angus breed and to provide our customers with proven superior Angus seed stock. Over these years we have retained our top producing bulls and females, returning them back into the herd. During this time less than a handful of our top females have been offered for sale. This has resulted in a herd of purebred Angus that has functional efficiency along with many outstanding traits when compared to the breed average. The Prairielane Angus herd has also remained a relatively closed herd for the last 50 years. We feel this is a unique opportunity for Angus breeders to add outstanding genetics into their own herds.

We would like at this time to say a special thank you to our many past customers of which many have become good friends. This past spring was our 34th annual bull and female sale. Without your support and confidence in our breeding program this milestone could not have been accomplished.

Once again thank you and will be looking forward to seeing you on October 13th at Virden.

Sincerely,

Blaine and Pauline Canning
Michael and Jessica Canning
Prairielane Farms Ltd.

PRAIRIELANE FARMS HERD HEALTH

Spring Breeding

Bull evaluations - Bulls vaccinated for footrot with Fusogard
Vaccination Replacement Heifers - Bovishield Gold FP5 (mod live BVD/IBR) and Ultrachoice 8 (blackleg)
Vaccination Cows - Bovishield Gold FP5 (mod live BVD/IBR)
Vaccination Calves - Bovishield Gold 5 (mod live BVD/IBR/BRSV/P13) and Ultrabac 7/Somnubac (blackleg/histophilus)

Fall

Vaccination Calves - Bovishield Gold 5 and Ultrabac 7/Somnubac
Vaccination Cows - Scour Bos 9 (ecoli and viral scours)
Vaccination Bred Heifers - Scour Bos 4 followed by Scour Bos 9

From the Sale Manager

DjH

The Prairielane herd can be illustrated as a shining example in Canada of how progress may be measured by using specific Performance Testing as a tool of the trade.

The Canning family have been raising Angus since 1921, since 1968 every animal is weighed at birth, weaning and yearling and since early 1970 the breeding program totally evolved on detailed attention to Performance Testing.

Early bulls with great influence was King Marshall 2nd, a son of the great Earl Marshall, this bull had also been in service at Heatherbrook. The early influence of the Jorgenson Angus of Ideal South Dakota such as Rito 707 of Ideal 836-71 as well as bulls from Dave Nichols of Bridgewater, Iowa, as well as Traveler, EXT, Final Answer, Mytty in Focus, Bismarck and Mohnen Dynamite to name just a few.

This has been a closed herd for many years with all the top females going back into the herd and the top sons of AI bulls have been used very successfully in the Prairielane program.

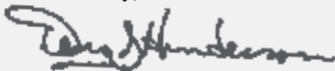

In 2003 John Elliot of Rawburn Angus in Scotland purchased three top producing females returning to buy another five in 2009 to go into the Rawburn embryo program. Two of the females were the highest performance females in Canada for yearling growth and resulting from this was Rawburn Rommel E423 who sold for £32,500 for half interest.

In 1967 Blaine, showed the Grand Champion 4H steer at Brandon and in 1997 received the prestigious BIF (Beef Improvement Federation of North America) award, in 2003 the Vandale award and in 2004 the Manitoba Breeder of the Year. The Cannings have also been presented the Centennial Farm award. Blaine has served as Director and President of the Manitoba and Canadian Angus Associations.

The Prairielane herd is a genetic treasure trove and its dispersal represents one of the great opportunities for Angus breeders to add to their program. This dispersal consists of all the herd sires, yearlings and sound cows and calves up to and including the R cows.

If Blaine, Pauline, Michael, Jessica, any of the sale staff, Linda or myself can be of assistance in any way regarding the Dispersal of the Prairielane herd, please give us a call.

Yours truly,

Douglas J. Henderson

CATTLE INSPECTION: All carry permanent identity tags, corresponding to Sale Lot Numbers. All shall be available for inspection prior to the sale. THIS IS A COWHERD DISPERSAL FOR PRAIRIELANE ANGUS: Every animal to be offered "as they are" on Sale Day, with no further guarantee expressed or implied. Every precaution will be made to announce known blemishes from the Auction Stand.

ANNOUNCEMENTS: Errors discovered in the catalogue will be corrected by announcements from the auction stand at sale time and such corrections will take precedence over the printed matter in the catalogue.

RELEASE: No cattle will be released until the conclusion of the sale. Each animal becomes the risk of the purchaser as soon as sold.

MAIL BIDS: May be entrusted in complete confidence to any of the Sale Staff listed or to Douglas J. Henderson & Associates Ltd.

INSURANCE: Ownership risk to purchaser commences when the Auctioneer's hammer falls. Livestock coverage will be available at the clerk's desk from the appointed representatives on Sale Day, also from the Sales Management.

TERMS OF SALE: Are cash or cheque at par, payable on Sale Day. No release will be given until satisfactory settlement has been made. We reserve the right to withhold animals from export shipment for whom payments have not been received prior to departure times.

EVERY ANIMAL sells to the highest bidder and in cases of disputes, the auctioneer's decision will be final.

ALL PERSONS who attend the Sale do so at their own risk, and the owners, Management and Sale Staff assume no liability, legal or otherwise, for property loss or for any accidents that may occur.

Please bring this catalog with you to the sale

John Elliot (Rawburn Angus, Scotland) and I have made a few trips over the past years to Prairielane, and have had great success in doing so. Rawburn and BJ Cattle Company have owned a number of these cows in partnership and now we own a few ourselves. The original cow we got was the 0011 cow, she has enhanced our program in Canada by producing to everything we have ever mated her too. She has added lots of power and performance to our program.

Her daughter 3050 has again been one of my favourites since we owned her. She was a big part of our display at the World Forum, and made a lot of friends from several different countries. Her genetics will again be a big part in us at BJ Cattle Company moving forward. Just last year we showed an ET son at Medicine Hat Bull Sale where he was Grand Champion Bull. This year one of our best heifer calves is again an ET daughter of 3050!

The 2001 cow again has been a cow that almost everyone loves when they visit, moderate, functional, fantastic udder, and easy on the eyes, not to mention she can produce every year. I guess you can see that we at BJ Cattle Company are very happy with what Prairielane genetics have done for us. They have great numbers, but besides that, they are cattle that work in the real world. Every female we have owned from Prairielane has had the same elements - great feet, awesome udders, the ability to gain weight, fertility that is needed today, just over all great cattle from an outstanding guy that has concentrated on raising his type of cattle and nothing else, and I would say Blaine you did a great job in doing so.

Hats off to you and the rest of the family and I hope you are as successful in what you chose to do going forward as you were in the Angus breed! Great Cattle from Great People is what Prairielane Genetics have done for us at BJ Cattle Company!

Regards
BJ Scheirlinck, BJ Cattle Company

Prairielane Dispersal

Genetics in Scotland

When visiting and living in Canada we viewed many herds and thousands of cattle. Of the individuals that we admired most for their quality and production records in numerous herds, a trend could be observed. They went back to cattle bought from the Prairielane programme. Often their ancestors had not been purchased for high prices or even from the top of the programme, but their impact within that herd had been great.

This observation, in association with the herds domination of the Canadian performance programme, encouraged us to visit the Ranch in 2003, where we witnessed a herd of cows that tolerated no passengers, with every individual assessed and selected on its own performance and ability to transmit traits of economic importance.

At this time we purchased three cows from the herd to enter into our embryo programme. All have surpassed our expectations with Prairielane 8116 Rosebud 011 now becoming arguably the most influential cow for both performance and show ring success in the history of the UK herd book. Her descendants now dominate performance records in the UK, with offspring and genetic sales now in excess of £300,000 (\$510,000). Her daughters have been National Champions and her sons have bred Perth Bull Sale Champions and are being used worldwide.

Since our initial purchase we returned in 2009 and bought five more females from the herd. Although the offspring are young, as with their predecessors, the results look especially promising.

We wish the Canning family a successful sale. Their dedication to a programme that has ignored sale and show hype and for generations, selected stock that perform to the highest levels and make money in the real world is commendable.

A message to buyers of these cattle. They will exceed your expectations time and again. They certainly have in our herd.

£32,500 semen sold worldwide

Prairie Farms Purebred Angus Cattle Since 1921

History

The "Canning" name and Angus cattle go back many years. In Manitoba, E.S. Canning first established the Canning connection with registered Angus cattle in 1921. The original herd started with three foundation females originating from the "importer" herds of J.D. Larkin, Queenston, Ontario, W.F. Gordon-Cumming, Calgary, Alberta and J.D. McGregor, of Brandon, Manitoba. Two brothers Wilbert A. and Luard Canning carried on with the Angus with registrations beginning in the 1930's. Three additional females were acquired from H.R. McBratney of Souris. These dams carried the "Charmer" family name. Also more registered Angus were purchased from Elbridge Good of Souris carrying the family names of "Elm Parks Rosebud" "Porleethen Lucy" and "Missie of Glen-Conglass".

During that time the Cannings Angus carried the prefix "of Sifton" referring to the municipality where the Cannings lived. Over time Wilbert Canning used the name of "Prairie Pasture" when naming offspring. After twenty years of registrations by W. A. Canning, the family breakdowns to that time were as follows: "Rosebud" (37), "Charmer" (31), "Missey" (12) and "Lucy" (5) head. Not long after that the "Duchess" family name was added to the herd.

During the W.W. II era Wilbert and his son Clayton showed cattle locally and bulls were sold privately and at the Brandon bull sales. Clayton and his wife Mona continued to expand the herd. In the early 1960's Clayton and his son Blaine changed the naming of the registrations from "Prairie Pasture" and the name "Prairielane" was established. The cattle were registered under C.W. Canning and Son. During the mid 1960's the Cannings, Clayton and Blaine, along with the advice from Dr. Gunther Rahnefeld a "geneticist" who was working at the Brandon research station, decided to try to track some of the efficiencies of the Angus Prairielane cattle.

It was at that time that a breeding program was set up focusing on economically important traits. Since 1968 every animal was weighed at birth, weaning, and yearling. The selection began using the within herd ratios to better define the higher producing individuals. To this day there are over 5000 individual histories in the Prairielane data bank. Information of every individual since 1968 has been kept on file.

Since the 1970's Prairielane's breeding program has totally evolved on detailed attention to performance testing on both home tests and at the Douglas Testing Station in Manitoba. Prairielane bulls performed exceptionally well at the various test station during that time. In the mid 1980's Prairielane added Red Angus into the herd.

Through AI, bulls from Jorgenson Angus of Ideal South Dakota such as "Rito 707 of Ideal 836-71", along with bulls from Dave Nichols of Bridgewater, Iowa "Landmark", plus other outstanding AI bulls such as "Traveller", "EXT", "Duke" etc. have had a profound influence on the herd. With over 30 years of detailed breeding, the results of intense selection has allowed for moderate birth weight increases along with substantial increases in weaning and yearling weights. In 1968 the average weaning weight was 420 lbs. males and females, with the yearling bulls having a 632lb. 365-day weight. In 2004 the average weaning weight was 645 lbs. males and 600 lbs. females without being creep fed. The Angus breed has come a long way; the calves weaned in 2004 weigh more than the yearlings did in 1968. This being accomplished without creep feed as the milking ability of the cowherd is of utmost importance. Peers have recognized these accomplishments in the cattle business, and in 1983 Clayton Canning was presented with the Manitoba Premiere Performance Breeder award. In 1997 the Beef Improvement Federation of North America recognized Blaine and Pauline with a nomination to this prestigious organization. In 2004 Prairielane Farms was awarded the Manitoba Angus Breeder of the Year.

In recent years Prairielane has placed more emphasis on a balanced approach in selecting replacements and breeding stock. The goals of Prairielane have remained constant over the years. 1. To select cattle that will grow rapidly to one year of age, 2. To maintain a herd with high reproductive performance and physical soundness, 3. To have cattle that are quiet and easy to handle, 4. To have cattle that are easy fleshing and that can adapt to environmental change, 5. To have cattle that can produce a positive bottom line. These are the goals that drive the Prairielane selection process. The Prairielane herd has remained "closed" for over 15 years with new genetics being introduced only through AI. The use of EPDs has helped the Cannings reach their goals. We feel that this is the only way genetic progress can be accomplished.

Blaine and Pauline's son Michael and his wife Jessica represent the fifth generation of Cannings that have made their living through raising registered Angus cattle. There are not too many herds that have only two letters in their herd prefix with the "IU" prefix tattooed into the ears of Prairielane cattle for many years.
