

RJK ANGUS of Redwater, AB
RED ANGUS PRODUCTION AUCTION
June 7th, 2014

Viewing at 11 AM • Sale at 1:30 PM
at Triple J Livestock Auction, Westlock, AB

ALL BULLS ARE DNA TESTED BY IGENITY

In conjunction with Summer Consignment Auction

17 Red Angus Yearling Bulls • 33 Two year old Red Angus Bulls
50 Red Angus Heifers, Bred Cows & Cow/Calf Pairs

See catalogue at: www.cattlepics.com

Rick (Owner) 780-942-4461 | Levi (Field Rep) 780-349-1446

Welcome!

2014 BRINGS HUGE OPPORTUNITY FOR THE CATTLE PERSONS!

A big THANKS for all the support last year to all that came.

This year we are offering the largest selection of 2yr bulls (33) mostly for heifers or calving ease, 17 yearlings and 50 females.

****We enter a new era of cattle raising with a guaranteed insurance pricing program for cattle (AFSC)-- a must to at least investigate as soon as possible "Before Sale". This takes a lot of the risk out of cattle farming.

Barrhead feeders now offers feeder & cow calf -loans if you need . With the new guaranteed price and an ABBA (farm financial plan) you can start or add easier than ever before.

Even with the winter still holding on into late spring the grass is coming. Lots of grain around makes this look like a perfect time to add-to or start into cattle.

You will like the variety of bulls we offer this year. Lots of variation in frame score and birth weights.

ALL BULLS offered CALVED UNASSISTED.

ALL BULLS offered have 12 DNA TRAITS to help you choose your bull. Some papered with EPDs... If you need papers please leave your info when paying for them. Thanks.

All bulls have been semen tested within 5 weeks (fresh) and have Hoof rot shots. Heather Barr will be there for insurance again this year. All our cows are ranch style calved on pasture unassisted (we just drive out -weigh and tag the calves). TAI for breeding.

We use the new cowbytes 5 and where able to feed "mid gestation" these cows on a 60 percent straw ration... which really helps with birth weight control and stretching the feed.

All our animals are on liquid feed (Prairie Liquid Feed) for protein/mineral supplement and we are on pasture residue grass until January (this year the November snow shut us down). Creep feed is only introduced at weaning. DNA has helped us choose our herd bulls in the top 29% (5) for feed efficiency which helps the feed / carbon footprint we leave.

Neogen-Genseek- DNA now gives us larger north-American results for me to compare to.

Our offering of bulls this year tops the list (above average) in lots of traits and we have bulls in the "rfi of 4 " top 8 %.

In the top 8% of feed efficiency they would drastically improve your next generation of feeding less- more productivity etc.

Our operation was able to start in the 29% (5) and over the last 6 years can see a dramatic improvement and on the bills.

The fastest and easiest way to improve your herd for any trait is through a bull, keeping back offspring.

You will note that we keep back 10 to 15 % offspring to improve our herd.

We again will sell top end- pairs- bred cows and open heifers. This again will be a hard choice, because we spend a lot of time with our cows, keeping them calm and observing them. List of females selling will be at the market when they arrive. Hoping to have them settled Wednesday night for viewing Thursdays sale -Friday and sell Saturday.

2 yr bulls are all hand fed to work with them, but you will not find fat bulls because they are walking on 25 acres -bale grazing on green feed and hay and topped up with Hi-pro pellets to gain 2 to 3 lbs.

1 yr bulls are penned to work with and feed free choice rations (some tag on them this year at picture time) to mature.

The yearling bulls had huge gains this year (note DNA too) and they did well.

You will note the high numbers of ribeye and marbling -- these 2 are very difficult to get both high together-- and low feed intake numbers.

Call us if you have any questions --- This DNA traits will make huge waves across the cattle industry in the next few years with the federal government pumping so much money into the research. First local school set to happen at Olds through the Canadian Angus.

You will see lots of info on the Efficiency, improvements the key to agriculture/ beef production and reducing our carbon footprint.

This sale offers bulls and females working in this direction.

Hoping to see you at the Sale.

Thanks,

Rick Kuefler

Results Key *for Beef*

CARCASS QUALITY

The **IGENITY** profile scores for Quality Grade and Marbling reflect an extremely powerful multiple marker analysis that indicates an animal's potential for intramuscular fat deposition and AAA Quality Grade or better carcasses.

Marbling Score And Quality Grade

Canadian AAA grading has the same minimum marbling requirements as for USDA Choice. The USDA marbling score is based on a 999 point scale. In a group of animals with an **IGENITY** profile score of "10" for Marbling, the average marbling score can be expected to be 161 points greater than animals with a score of "1". The **IGENITY** Marbling score is useful in deciding between animals with similar marbling EPD's or ultrasound data. Marbling points indicate how much intramuscular fat is present in the carcass, and thus contribute to the propensity to grade Canada AAA.

The **IGENITY** profile for Quality Grade indicates differences in magnitude that marbling scores will contribute to Quality Grade. More specifically, a group of animals with a Quality Grade score of "10" can be expected to have 64% more animals grade Canada AAA than a group of animals with a Quality Grade score of "1".

CARCASS COMPOSITION

The **IGENITY** profile scores for Yield Grade, Ribeye Area, and Backfat Thickness are calculated using multiple DNA markers that reflect the animals's genetic potential for these traits. These results provide a more complete picture of the Carcass Composition potential for an animal.

Yield Grade

Lean yield is an estimation of the percentage of the carcass that is red meat; it is not dressing percentage. When a carcass grades A or higher in Canada it also is graded for yield. A group of animals with an **IGENITY** profile score of "10" for Yield Grade can be expected to receive a Yield Grade score that is 1.3 of a grade higher than animals that receive a score of "1". Lower **IGENITY** profile scores reflect higher percent red meat yield (Y1 being the highest yield possible). Higher **IGENITY** profile scores reflect lower red meat yield (Y3 being the lowest yield possible).

<u>Yield Grade</u>	<u>Estimated Yield (%)</u>
Canada 1 (Y1)	> 59%
Canada 2 (Y2)	54-58%
Canada 3 (Y3)	≤ 53%

Ribeye Area

In a group of animals with an **IGENITY** profile score of "10" for Ribeye Area, the average Ribeye Area is expected to be 2.6 square inches greater than animals that score "1". Lower **IGENITY** profile scores reflect smaller ribeye areas, with higher scores reflecting larger ribeye areas.

Back Fat Thickness

In a group of animals with an **IGENITY** profile score of "10" for Back Fat Thickness, the average back fat is expected to be 0.37 inches (9.4 mm) greater than animals that score "1". Lower **IGENITY** profile scores indicate less external fat, while higher scores reflect more external fat.

A MINIMUM OF 2 MM OF BACKFAT IS REQUIRED TO GRADE A OR BETTER IN CANADA.

Tenderness

The **IGENITY** profile score for Tenderness represents an animal's genetic potential for tenderness as measured by the Warner Bratzler Shear Force test (WBSF), with "10" being the most tender and "1" the least tender. Less shear force means more tender beef. In a group of animals with an **IGENITY** profile score of "10" for Tenderness, 2.3 lbs. less shear force is required in the WBSF test than animals with an **IGENITY** profile of "1". Higher **IGENITY** profile scores represent animals that are more tender than those with lower scores.

MATERNAL TRAITS

Reproduction is arguably the most economically important trait for Cow/Calf producers¹. Heifer Pregnancy Rate indicates a heifer's chance at becoming pregnant over a normal breeding season, relative to other heifers. Stayability indicates the chance a heifer will remain in the herd until at least six years old, relative to other animals. Maternal Calving Ease is measured as the percentage of unassisted births – a higher value indicates greater calving ease. These **IGENITY** profiles can be used to make replacement heifer decisions as well as be used to select future maternal sires.

DOCILITY

Calm cattle are not just about handler safety – calm cattle eat more², have better response to vaccinations and preconditioning³, and are more tender⁴. The **IGENITY** profile for docility indicates the animal's genetic potential to be calm, or to have calm offspring. Higher **IGENITY** scores for this trait indicate a higher likelihood that calves possess acceptable behaviour.

AVERAGE DAILY GAIN

A key profitability measurement for any operation, Average Daily Gain is measured in lbs of gain per day. The **IGENITY** profile result for Average Daily Gain identifies an animal's genetic potential for rate of gain, for both calves and post-weaning growth. Animals which score a 10 are capable of gaining an additional 0.81 lbs per day over animals which score a 1 – which means a 166 lb difference over 205 days.

RESIDUAL FEED INTAKE (FEED EFFICIENCY)

The **IGENITY** Feed Efficiency analysis predicts genetic potential for Residual Feed Intake (RFI). RFI describes an animal's feed intake above (Feed Efficiency) or below its predicted needs for maintenance and growth. An animal with a low RFI score will

- Eat less to achieve the same gains,
- Gain more on the same amount of feed,
- Require less feed to maintain body condition as a mature adult.

Combining the Feed Efficiency with Average Daily Gain results gives you a powerful look at an animal's ability to grow efficiently, maintain body condition as a mature animal and have efficient offspring.

Results are specific to Bos taurus.

IGENITY PROFILE RESULTS AND ASSOCIATED VALUES.

What an IGENITY profile means.

IGENITY profile scores range from a low of 1 to a high of 10 for each economically important trait analyzed.

MULTI-BREED EPD BASE SIMPLIFIES SELECTION

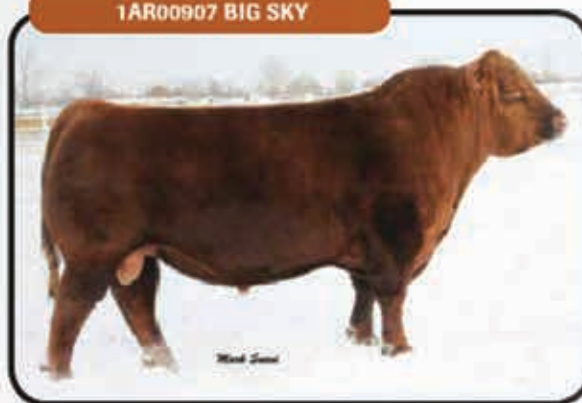

The fall 2012 genetic evaluations of the American Simmental Association (ASA) and Red Angus Association of America (RAAA) marks the first time major breeds have expressed their EPDs on a common base. Beef producers will now be able to directly compare EPDs across breeds. This means, for the first time in history, producers will be able to directly compare Red Angus, Simmental and registered hybrid/composite seedstock.

For decades, each breed association has presented their EPDs in their own language (the base). The base is a reference point for any trait against which subsequent generations of animals are compared. Some breeds pick a given year (several generations of cattle ago) as their base year, while others set the base as the average EPDs of a specific group of high accuracy sires. This assures that the base population, which future calf crops are to be measured against, remains stable.

It will take time for producers to become accustomed to forming a common base. However, the boards of the ASA and RAAA unanimously agreed this was a positive step for the beef industry. It will take some time to adjust to looking at EPDs on the new base.

Table 1 shows 1AR00907 BIG SKY on the old RAAA base compared to his EPDs on the new multi-breed base. Notice that his EPD changed, however his rank within the breed remained relatively the same. Table 2 provides a purebred Simmental example. Again, you will notice that the EPDs for 1SM00094 IN DEW TIME changed but his rank within the breed remained relatively the same.

1AR00907 BIG SKY

1SM00094 IN DEW TIME

51 50 Red Angus Heifers, Bred Cows & Cow-Calf Pairs

Feed that works as hard as you do!

HI-PRO

TRIPLE GOLD 13% BULL PELLETT

- Formulated to target controlled growth and promote conditioning of mature cattle
- Maintains condition of mature bulls
- Promotes moderate growth in replacement and bred heifers

TRIPLE GOLD 13% SHOW BULL PELLETT

- Formulated for cattle destined for shows and sales
- Higher in oil content to increase conditioning and hair shine
- Feed at least 6-8 weeks prior to sale day

TRIPLE GOLD 13% TD SHOW BULL PELLETT

- Raise the next Grand Champion using the "Touch-Down" Show Pellet
- Highest oil content in the Triple Gold product line for maximum conditioning and shine
