

Production Sale
Saturday, June 16, 2012
Triple J Livestock - Westlock, Alberta

Welcome to my 2012 Sale

This year we are offering more bulls, 25-1yr and 19-2yr olds all with new DNA -EPD, open & bred heifers (exposed April 12th to sale to 53X will have ultra sound done for the first 30 days), cow calf pairs and bred cows to be picked after the printing of the catalogue (on sale order that day).

DNA news----Neogen has purchased Merial Canada out and our DNA will be from them. We have been involved with DNA in animals since our Angus Breeders training course at Olds College several years ago (one of the best short courses we have ever taken). Had all our herdsires as you see done to start our profile. This has helped us improve our herd. Our focus has been to build a ``female factory`` from the 46 breeders we originally purchased from. With the 12 traits to choose your specific profile from, you can see that ours has been to make females- docile- with stay ability and calving ease along with feed efficiency and better growth. We still like a good looking bull with above average epd, but this just makes adding a better bull a lot easier. DNA would be 50% from bull--- 50% from cow-- to the calf. Starting your new herd or adding to it with a profile will be the way of the future.

HIPS -Wildcard 60U--Our Mature herdsire for sale needs no intro- Farmfair senior reserve coming from the hips dispersal --\$35,000 sire and a cow that put it all together.

With top end numbers and DNA, very complete moderate framed bull that is quiet has done a lot of work for us. We have semen on him, but have a tough time walking him with his daughters and sisters in the herd. - HE SELLS!

Take a look at these.

RJK 030T calves. A TGA newtrend 4162 son -light b.w.76lbs out of a Geis bred heifer we purchased. Quiet bull that showed potential - he replaced Nitro as a pick-up bull (After- A.I.) and has done well.

With a large amount of GBL112N- Nitro semen we will continue to use him for length frame and feed efficiency

Heifers to breed... we have several small birth 2yr old bulls & yearlings to chose from.

Special attention to the 2 Dunlouse red native 2yr olds - exceptional vigor at birth one has very high 7 out of 12 DNA traits the other is my favorite out of the 4N hips flush cow -53X we choose to breed our heifers for this sale.

Our lead off bred heifer #45 (hopefully ultrasound confirms these bred in 30 days) is from our \$14,000 signature cow from Brox stock farms . One of the nicest jobs Net worth (A.I. bull from Brylor semen) did. Cresta 31N held the frame down and Net worth put more body to this female.—Her grand daughter bred Trend setter (Brylor semen)—Nitro- is worth a long look too. All bulls have been semen checked and 2 shots for hoof rot.

Our intent Always—was to sell these out into the commercial herds.

IF YOU REQUIRE PAPERS -arrangements need to be at or before the sale. Some are papered some are not even registered (still trying to be a gold paper register member).

Cattle will be at Triple J on Friday and Saturday prior to sale for viewing or before at the farm. A BIG THANKS AGAIN to all our past buyers and supporters. This is only possible to do with YOU.

Thanks,

RICK KUEFLER

RJK Angus, Box 87, Redwater AB T0A 2Z0

Results Key *for Beef*

CARCASS QUALITY

The **IGENITY** profile scores for Quality Grade and Marbling reflect an extremely powerful multiple marker analysis that indicates an animal's potential for intramuscular fat deposition and AAA Quality Grade or better carcasses.

Marbling Score And Quality Grade

Canadian AAA grading has the same minimum marbling requirements as for USDA Choice. The USDA marbling score is based on a 999 point scale. In a group of animals with an **IGENITY** profile score of "10" for Marbling, the average marbling score can be expected to be 161 points greater than animals with a score of "1". The **IGENITY** Marbling score is useful in deciding between animals with similar marbling EPD's or ultrasound data. Marbling points indicate how much intramuscular fat is present in the carcass, and thus contribute to the propensity to grade Canada AAA.

The **IGENITY** profile for Quality Grade indicates differences in magnitude that marbling scores will contribute to Quality Grade. More specifically, a group of animals with a Quality Grade score of "10" can be expected to have 64% more animals grade Canada AAA than a group of animals with a Quality Grade score of "1".

CARCASS COMPOSITION

The **IGENITY** profile scores for Yield Grade, Ribeye Area, and Backfat Thickness are calculated using multiple DNA markers that reflect the animals's genetic potential for these traits. These results provide a more complete picture of the Carcass Composition potential for an animal.

Yield Grade

Lean yield is an estimation of the percentage of the carcass that is red meat; it is not dressing percentage. When a carcass grades A or higher in Canada it also is graded for yield. A group of animals with an **IGENITY** profile score of "10" for Yield Grade can be expected to receive a Yield Grade score that is 1.3 of a grade higher than animals that receive a score of "1". Lower **IGENITY** profile scores reflect higher percent red meat yield (Y1 being the highest yield possible). Higher **IGENITY** profile scores reflect lower red meat yield (Y3 being the lowest yield possible).

<u>Yield Grade</u>	<u>Estimated Yield (%)</u>
Canada 1 (Y1)	> 59%
Canada 2 (Y2)	54-58%
Canada 3 (Y3)	≤ 53%

Ribeye Area

In a group of animals with an **IGENITY** profile score of "10" for Ribeye Area, the average Ribeye Area is expected to be 2.6 square inches greater than animals that score "1". Lower **IGENITY** profile scores reflect smaller ribeye areas, with higher scores reflecting larger ribeye areas.

Back Fat Thickness

In a group of animals with an **IGENITY** profile score of "10" for Back Fat Thickness, the average back fat is expected to be 0.37 inches (9.4 mm) greater than animals that score "1". Lower **IGENITY** profile scores indicate less external fat, while higher scores reflect more external fat.

A MINIMUM OF 2 MM OF BACKFAT IS REQUIRED TO GRADE A OR BETTER IN CANADA.

Tenderness

The **IGENITY** profile score for Tenderness represents an animal's genetic potential for tenderness as measured by the Warner Bratzler Shear Force test (WBSF), with "10" being the most tender and "1" the least tender. Less shear force means more tender beef. In a group of animals with an **IGENITY** profile score of "10" for Tenderness, 2.3 lbs. less shear force is required in the WBSF test than animals with an **IGENITY** profile of "1". Higher **IGENITY** profile scores represent animals that are more tender than those with lower scores.

MATERNAL TRAITS

Reproduction is arguably the most economically important trait for Cow/Calf producers¹. Heifer Pregnancy Rate indicates a heifer's chance at becoming pregnant over a normal breeding season, relative to other heifers. Stayability indicates the chance a heifer will remain in the herd until at least six years old, relative to other animals. Maternal Calving Ease is measured as the percentage of unassisted births – a higher value indicates greater calving ease. These **IGENITY** profiles can be used to make replacement heifer decisions as well as be used to select future maternal sires.

DOCILITY

Calm cattle are not just about handler safety – calm cattle eat more², have better response to vaccinations and preconditioning³, and are more tender⁴. The **IGENITY** profile for docility indicates the animal's genetic potential to be calm, or to have calm offspring. Higher **IGENITY** scores for this trait indicate a higher likelihood that calves possess acceptable behaviour.

AVERAGE DAILY GAIN

A key profitability measurement for any operation, Average Daily Gain is measured in lbs of gain per day. The **IGENITY** profile result for Average Daily Gain identifies an animal's genetic potential for rate of gain, for both calves and post-weaning growth. Animals which score a 10 are capable of gaining an additional 0.81 lbs per day over animals which score a 1 – which means a 166 lb difference over 205 days.

RESIDUAL FEED INTAKE (FEED EFFICIENCY)

The **IGENITY** Feed Efficiency analysis predicts genetic potential for Residual Feed Intake (RFI). RFI describes an animal's feed intake above (Feed Efficiency) or below its predicted needs for maintenance and growth. An animal with a low RFI score will

- Eat less to achieve the same gains,
- Gain more on the same amount of feed,
- Require less feed to maintain body condition as a mature adult.

Combining the Feed Efficiency with Average Daily Gain results gives you a powerful look at an animal's ability to grow efficiently, maintain body condition as a mature animal and have efficient offspring.

Results are specific to Bos taurus.

IGENITY PROFILE RESULTS AND ASSOCIATED VALUES.

What an IGENITY profile means.

IGENITY profile scores range from a low of 1 to a high of 10 for each economically important trait analyzed.

63

cow-calf bred cows

Hi my name is Krista Van Sickle and I run a small purebred Simmental and Purebred Angus herd northwest of Onoway on the family farm. I started in the Simmental breed several years ago when I purchased my first 4-h heifer and have continued to build on it each year. I had just started in the angus breed last year when I decided to expand my herd and came to the RJK Angus production sale.

KRISTA VAN SICKLE
