Welcome friends and fellow cattlemen. 2014 is an exciting new year for us and everyone in the cattle business, marking our 1st live auction bull sale and high prices in the cattle market. Hopefully our markets will follow the trend with the USA in moving bred cows and heifers to the next price level. That's cows and heifers trading at that \$1800-\$2300 mark.

At SSF, our program is simple. We try to use performance sires that leave big volume, muscular cattle that are easy doing and functional. We only breed our cows for 45 days, keeping our fertility up there. Our cows will swath graze for 3 months before coming home to calve mid January. All bulls are developed on a high roughage ration of silage, hay and pellet.

All bulls will be semen checked and evaluated by a vet. We stand behind our bulls 100%. If you are not happy please pick up the phone and give us a call.

Please feel free to stop by and have a look before the sale. If you can't make it sale day call us and let us help you with your needs. Join us for Steak and Pie starting at 11:30 sale day.

We look forward to seeing you. If you have any questions, give us a call.

This Net Worth son (we call him Hart) was the highest selling bull out of the 2011 Cattleman's Connection Bull Sale, Brandon, Manitoba. He's as long as a freight train, wide topped as they come, a deep quarter with lots of muscle, excellent feet and a flawless structure. His sons will leave a big impact on your herd.

Lewis was a big hip bull with length and style. He's easy doing. We only got 1 year out of him before he got hurt. We used him as a clean up bull on our heifers after AI. Now we wish we'd used him harder because his calves look awesome.

Expected Progeny Differences - EPDs

EPDs are an estimate of how future progeny of each sire can be expected to perform in each of the traits listed. EPDs are followed by % Accuracy - the higher the Accuracy, the higher the reliability.

BW: Birth Weight EPD - expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

WW: Weaning Weight EPD - expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires. Weaning weight is an indicator of growth from birth to weaning (205 days of age). The calf's growth during this period is influenced by its own ability to grow plus its mother's maternal abilities.

YW: Yearling Weight EPD - expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

MILK: Milk EPD - is an indicator of milking ability in daughters. It represents the differences in weaning weights of calves due to the amount of milk produced by their mothers. It is expressed in pounds of calf weaned.

TM: Total Maternal EPD - is a combination of the weaning weight and milk EPDs. It is calculated as: 1/2 Weaning Weight EPD + Milk EPD = Total Maternal. This EPD represents the differences in weaning weights between calves due to mothering and milking ability of their dams.

Why Angus Tags ... Brand Your Cattle!

The Angus tag, noted for its green color, is the only way that you can prove to

the order buyer, the feed yard, the packer and most of all the consumer, that your calves are at least one half Angus.

Angus has been synonymous with either solid black, solid red or black and red baldies. That no longer holds true. With so many other breeds borrowing the Angus colors we must be able to identify the Angus cattle in order to maintain the integrity of the breed and the quality of the meat that the consumer has come to expect from Angus labelled beef.

CAA strives to provide our members and their customers with innovative programs and services, to continue advancing the quality, reliability and value of Angus and Angus-influenced seed stock used in the commercial beef industry.

Mission: To maintain breed registry, breed purity and provide services that enhance the growth and position of the Angus breed.

When the consumer is asking for Angus beef, the packer must source the Angus cattle. The easiest way of, and most cost efficient is by using Angus tags at the farm or ranch gate. The other way would be for the packer to DNA test these cattle for Angus genetics. This would be cumbersome and an added cost which in turn would be passed on to the producer thus lowering his price received at the market.

To many times we hear, "If I would get a premium for using the Angus tags then I would use them". Well, any time that you get more than the average price for the day or for any other breed that day, this should be considered a premium.

All owners of a **REGISTERED** Angus bull that has been transferred to them or their farm or ranch are eligible to purchase Angus tags. These tags can only be purchased from the Canadian Angus Association. The cost of the tag is the same as those carried by most retailers and in some cases less. As a bonus, the Angus office will age verify your tags upon request. It can take up to one week from the time of order until you receive your tags right at your doorstep, but the average is less.

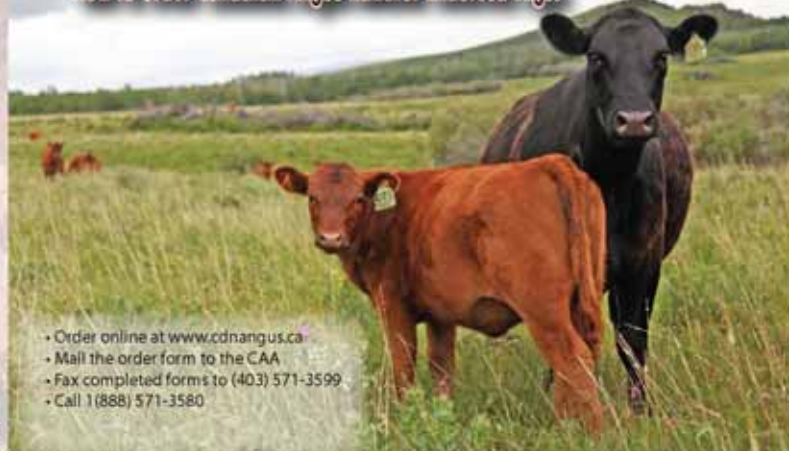

To qualify for the program, you need only to use the CCIA, Angus RFID tag with

the green button that has the black A on it.

Please use Angus Tags and help keep Angus cattle at the forefront of the beef industry.

How to Order Canadian Angus Rancher Endorsed Tags:

- Order online at www.cdnangus.ca
- Mail the order form to the CAA
- Fax completed forms to (403) 571-3599
- Call 1(888) 571-3580
