

SOUTH VIEW RANCH

Your Herd Bull Factory

**13th ANNUAL
RED & BLACK ANGUS
BULL SALE**

THURSDAY, APRIL 11, 2013 ~1:30 PM
at South View Ranch, Ceylon, SK

Welcome . . . from South View Ranch

From everyone at South View Ranch we extend our personal invitation to you to join us on April 11, 2013 for our 13th Annual Bull Sale. Come early for coffee and donuts, lunch and stay for refreshments following the sale. On offer will be a strong pen of functional, sound, structurally correct bulls for your heifers and cows.

The dams and granddams are sound, hard working females. We breed on rotational grazing paddocks of crested/alfalfa mix, later moved to native pasture for the summer. After weaning the cows go out grazing until the snow gets too deep. They are turned onto swath grazing or bale grazing. We bring them home a couple of weeks before calving. All cattle are on a complete herd health program advised by Deep South Animal Clinic.

The bulls are in excellent working condition, fed for longevity and soundness. Prior to 205 day weights the bulls are raised naturally on mother's milk and grass. Since weaning they received a balanced growing ration of pro pellets with a mineral package and chopped hay. They are housed in large areas for optimum exercise. All the bulls on offer will be semen tested, vet inspected and scrotal measured with performance records and carcass data.

If you are unable to attend the sale, please feel free to come anytime to have a look as sale day phones will be available or consider our sight unseen purchase program. Rest assured; you can buy with confidence as the culling has been done. If you have any questions or need any assistance give us a call or stop in.

We sincerely thank our many customers for your interest and support of our program. We appreciate the opportunity to work with you. We make our living from the cattle business so our customers success is very important.

We look forward to visiting with you on April 11th. Hope to see you there!

Bandit 18X or "Hitch" as we call him has definitely surpassed our expectations. He is long spined, deep, wide based and muscular with a great hindquarter, good foot, exceptional disposition and is dark red. A calving ease sire, his first sons had a birth weight average of 81 lbs and WW ratio of 102. They are thick and muscular with style and eye appeal, great hair coats and awesome dispositions. Hitch has excellent EPD percentiles in all areas. 13 sons sell, all from first calf heifers.

152X is an ET from the legendary 6F cow at SVR and Net Worth 4200. 6F was a very attractive feminine fronted cow with a perfect udder and feet, right up to age 16. Net Worth 4200 had great individual performance and carcass data. We chose to use 152X for his overall depth and thickness, awesome hair coat and character. He has excellent EPD percentiles. Unfortunately we lost him to a breeding injury.

500W is an outcross bull we purchased for his low birth weight and strong performance. Paternal grandsire Kodiak 5R is one of the top sires in the Angus industry. His progeny have consistently topped sales and are in high demand.

HF KODIAK 5R
Sire of 2W and 115W

2W and 115W are paternal brothers we selected from the Geis Angus bull pen to infuse the Kodiak 5R genetics into our herd. 5R is one of the leading sires in the Angus industry today. Both bulls sire calving ease, performance and eye appeal.

Herd bull prospect.

A very complete bull, long spined with depth, thickness and eye appeal. He has the tool box to get the job done. Dam is a Sitz Alliance 6595 granddaughter. She truly carries on that depth and fleshing ability. One of the favorite cows at SVR.

Carcass Data

What is Ultrasound?

Ultrasound has become an everyday use of "frequencies" to detect those things that we can not normally see with our naked eye. Example: (*Medical World* - it is used for a host of functions from detecting bodily problems to detecting the sex of a young couples first new born). In the outside world it is used to detect cracks or possible structural flaws in all types of equipment from bridges to engines. In beef cattle it is used to detect three major components of a live animals carcass composition; that being muscle (meat), fat thickness and IMF (Intra Muscular Fat or Marbling). As well, it is quite commonly used to detect the sex of embryos being carried with an amazingly high degree of accuracy.

When is it used?

For any meaningful information it is best done during some relative time period similar to what slaughter ages are to be. The CUP system adjusts the carcass information to one year of age (similar to adjusted yearling weights). This then gives us at least a simple level playing field for making choices or decisions within common groups.

How are the Measurements Expressed?

Rib Fat - either in inches .3 inches or in cm's 8 mm

AREA - usually in square inches

IMF or MB - as a % of that area (eg. 4.2 = 4.2%)

RP = Retail Product - is a % of saleable carcass

Why ultrasound, or better yet should we pay attention to this information?

Within the seedstock industry it seems like a distant or vague result that holds little real value. But in the commercial cattle world this tool of using ultrasound has become a well documented practice that when used has resulted in a clean, positive, decision making management choice resulting in extra profits of \$30 per head and higher. The ultrasound carcass evaluation when used a short time (7 - 10 days) prior to slaughter simply allowed the seller to market on a grid system or not at an optimal time. This live presort has resulted in an 80% - 95% degree of accuracy following slaughter. The pre slaughter carcass data corresponded to slaughter data with measuring IMF and Fat to this degree of accuracy). As well reportedly we find major players in the North American slaughter industry securing software programs to in fact use this technology for a much more economic decision on their front. "Apparently the information is not as vague as we may believe."

What is good or what is bad?

None of the figures or information is bad - the information should help us identify which animals or groups of animals are superior for different traits, ie the high IMF bulls could be sourced to use on Continental cows who may well have lower IMF tendencies, or, large AREA bulls or sire groups could be used on low yield, easy fleshing British cows whose IMF genetic makeup could already be abundant. Remember Retail Product (RP) takes a combination of this information into account. So is there a right answer?? Not at all, but there certainly is an advantage to you the buyer using this information if the bulls or sires are identified.

The first thing producers want to know about ultrasound is: How accurate is it? The answer to the questions depends on who does the actual scanning of the animals and who interprets the images. Ultrasound data on these bulls was

collected and analyzed by a technician that is certified by AUP and CUP. This means that this technician has met the standards set by many breed associations. The accuracy, although not perfect, is high enough that bulls selected based on ultrasound, results in positive genetic change in progeny carcass traits. Heritability for carcass traits are moderate to high, which is slightly higher than birth weights, weaning weights, and yearling weights.

IMF (Inter muscular Fat or Marbling)

IMF is the best indication that we have to tell us what kind of eating experience we will have when eating beef. Extensive research shows that average AAA and above marbling produces the most satisfied consumers. As marbling increases so does the juiciness, the flavorfulness, and the tenderness. This may not always be true but for the most part AAA marbling produces more satisfied customers than does A or AA marbling carcasses. The values are numerical that indicate the estimate of carcass marbling if the animal was slaughtered immediately following the evaluation. The scale is as follows:

3.0 - 3.9 - traces marbling A USDA Standard

4.0 - 4.9 - slight marbling AA USDA Select

5.0 + - small amount AAA USDA Choice

Back Fat (BF mm)

Fat depth influences lean meat yield. Fat bulls have less lean meat/muscle in the carcass. The fat measurement also gives an indication of the bulls fleshing ability. Calves from a bull with very little fat may finish too slowly in the feedlot. Body condition score (fat depth) in females is related to their ability to reach puberty at an early age, produce milk, rebreed and maintain a short calving interval. On the other hand, bulls carrying excessive fat may suffer reduced fertility.

Adjusted Ribeye Area (AREA in2)

The AREA is the largest muscle in the body at birth so AREA gives an indication of overall carcass muscling (measured in inches) and adjusted to one year of age.

RP (Retail Product/Cutability)% LMY)

RP is the percentage lean meat yield in the carcass. Yield grade is an important factor in both Canada and the US. Producing calves with a high genetic potential for this trait can be an important objective of a breeding program. Back fat will reduce yield by 7 to 8 times what REA will increase yield.

Summary

Like all traits we should avoid the extremes. Moderation is the key. As producers we need to evaluate our own females and then decide what kind of progeny we want to produce and this should dictate what kind of sire we want to purchase.

The Angus Associations, both AAA and CAA have adopted the CUP (Centralized Ultrasound Processing) program for Ultrasound Carcass Data and are using this information for formulating Carcass EPD's.

*Remember ...
Look for the Clipper Marks ...
If they are clipped - then they are
CUP'ed!*

Carcass data is to be compared within herd only.

Terms & Conditions of Sale

Bidding: Each animal will be sold to the highest bidder. Bidding Disputes: The auctioneer will settle any disputes as to bids, and his decision on such matters shall be final.

Terms: The terms of the sale are cash. The right of property shall not pass until after settlement is made. All settlements will be made with the clerks of the sale immediately following the conclusion of the sale and before any cattle will be released from the sale facility.

Purchaser's Risk: Each animal becomes the risk of the purchaser as soon as sold. Animals will be fed, watered and cared for at the purchaser's risk for a reasonable time. If leaving your bull in our care we strongly encourage you as the new owner to insure him.

Insurance: A representative of a major insurance company will be present to care for insuring cattle.

Certificate of Registry: A certificate of registry and transfer will be furnished for each animal.

Announcements: Changes of information contained in this catalogue relating to the animals offered for sale will be announced from the auction box and such announcements shall take precedence.

Health: All cattle will be in excellent health.

Breeder's Guarantee: All animals sold are guaranteed breeders by the owner. Any animal that has not proven itself a breeder within six months after date of sale, if in healthy condition, may be returned to the seller at buyer's expense. The seller reserves the privilege of trying for a period of six months to prove the animal a breeder. The seller at his option may either return the purchase price to the buyer or replace the animal with another of equal quality in full settlement of ALL claims. All complaints regarding breeding difficulties must be reported in writing by the buyer to the seller within the specified time above and any animal returned must be free from disease and in good health.

Retained Interest: SVR reserves the right to collect semen on any of our bulls selling in this sale for within herd use at buyers convenience and our expense.

Liability: Neither owners, sale manager, clerks, nor anyone connected with the sale assumes any responsibility, legal or otherwise for damage of any kind.

Contract: The above terms and conditions shall constitute a contract between the buyer and seller of each animal sold.
