## BLACK ANGUS BULL SALE

**DELORME ANGUS**  
EST 1963  
**50 YEARS YOUNG**

FRIDAY, APRIL 19, 2013 - 1:00 PM -

COWTOWN LIVESTOCK  
MAPLE CREEK, SK

## Welcome to this year's *Your Choice* Black Angus Bull Sale

2013 ... A milestone year for our families! It is not every day that a family program can celebrate 50 years as Registered Black Angus breeders **plus** 65 years as Commercial Angus breeders. There are four generations actively involved on the ranch today. Even the youngest at four and two years old, are able to recognize a springing cow. The breeding herd has a strong backing – generations of, in fact – starting with the Delorme's IJS prefix in the 60's plus the Wardberg homestead brought in one of the first set of Black females in this area, in the 1940s. After all these years we are still very passionate about the Angus Cow in our registered and commercial herds.

We are excited to offer another group of top end Angus bulls to you. With the variety and selection of bulls available, there is sure to be something for everyone, depending on what is important to you and what direction you want your herd to go. We continue to strive for functionality, along with performance and these bulls show great potential.

A great deal of emphasis is placed on our cow herd so you will find that we continue to picture and promote the females that make our operation viable and give us the opportunity to offer quality breeding stock to you. With that said – check page 28 for our 27<sup>th</sup> offering of **commercial replacement heifers** we are bringing to town the day before this year's bull sale. We've also added a private treaty opportunity to purchase the top-cut of a dozen crossbred heifers, as **Breds**, (page 19) in the fall. These are a fantastic set of females, definitely the front pasture type!

We'd welcome your company to look at the sale bulls, cows and walking sires that raised them. Time and distance putting limits on a road trip? Our web site as well as a Facebook presence will help you keep track of the cattle and horses. We hope you can be with us on April 19<sup>th</sup>. If you are unable to be with us in person, we have a competent support team to help you with absentee purchases.

Thank you to the many customers who have become friends and repeat customers over the years. You have taken the time out of your busy schedule to look through our catalogue which is very much appreciated. We look forward to hearing from you and welcome the opportunity to earn your business and truly offer "*Your Choice*" of Angus genetics.

**[www.DelormeAngus.ca](http://www.DelormeAngus.ca)**

Friday, April 19, 2013 ~ 1:00 PM CST @ Cowtown Livestock Exchange

Sale will be held at Cowtown Livestock Exchange 1 mile East of Maple Creek, Sask.

Sight Unseen Purchase Program:

If you would like to place a bid on any lot but cannot attend the sale, please contact the Cowtown Office (306) 662-2648 or Wayne Bowyer. Manager (306) 662-7371 They will competently and discretely handle your bidding instructions.

Viewing the Bulls:

The bulls are available for your appraisal at the ranch until **Tuesday, April 16<sup>th</sup>** at which time they will be moved to the Cowtown yards where they will be available for viewing from the time of their arrival until sale time on April 19<sup>th</sup>. We encourage you to stop in and take a look at this year's offering, as well as the sires, dams and siblings.

Buyer Registration:

Please register for a buyer number at the office prior to purchasing.

Sale Order:

Bulls will sell in catalogue order ~ Index page 44

**Sale Accomodations:**

Maple Creek Motor Inn: 306-662-4431  
Cypress Park Resort Inn: 306-662-4477  
Cypress Hills Motor Inn: 306-662-2639

Bull Evaluation & Health:

All bulls will have a complete fertility exam and semen test done prior to sale. Bulls will not be sold on a 'deferred' result. Current weights and scrotal measurements will also be available prior to sale. Bulls have been vaccinated: Trasvax 8, IBR/P13/BVD (StarVac/SomnuStar PH) and pesticide poured.

Bull Guarantee:

We guarantee to provide you with a sound, fertile bull capable of servicing a reasonable number of females. In the event that your bull is a non-satisfactory breeder, he will be replaced with a bull of equal value, or a credit will be given towards the purchase of another South Shadow bull. We will not provide replacement or credit for physical injury or mismanagement. Each animal becomes the responsibility of the purchaser as soon as sold. If you have a problem with a bull please notify us immediately.

Terms:

All bulls sell under the suggested Terms & Conditions of the Canadian Angus Associations. Terms of sale are cash or cheque payable to Cowtown Livestock. No bulls will be released without satisfactory settlement. When making settlement for your purchases, please leave specific instructions - **NAME** and **ADDRESS** - for transferring of registration certificates.

Insurance:

Insurance will be available sale day, on location from a Blythman Agency's representative. (306) 662-2604

Trucking Incentive:

Any buyer taking his bulls home on sale day will receive a \$50.00 discount applied to each bull that is taken home.

Keep and Feed Program:

We will keep your bull(s) here at the ranch until you are ready for them and can come pick them up. The bull(s) can remain until May 1, 2013 at no cost, on the condition that you insure your bulls. After May 1, there will be a \$3 per day charge.

Online Viewing and /or Bidding:

This year's sale will once again offer streaming video from ringside. To pre-register, visit [www.agrimart.ca](http://www.agrimart.ca) - then tune in to [www.agrimart.ca/cowtown/](http://www.agrimart.ca/cowtown/)

*Recommended for Heifers.* 24Z has a long, strong top, thick rear quarter, and good, big foot. His dam is a powerful cow with a great udder out of our calving ease bull 35R. With most of our Upward calves born in the 70 to 80 lbs range and our calving ease bull 35R on the bottom side, 24Z's calves should come easy. He also has EPDs in the top 15% or better for all traits, so he should have calves that really get up and grow. MGD, 13R and her New Frontier Sire both have Elite status.

**2013 - Celebrating 50 Years as Breeders of Registered Black Angus Cattle**

The *Jay En Dee* herd goes back to 1963 with the purchase of 5 registered Angus heifers from Bell Brothers of Pense, SK. They were the tall and long heifers that they culled for the "pony-type" in those days. The first sire we bred these heifers to was Misty Moore Bestman 16Z ~ he had stretch and height.

In 1966 the Grand Champion bull was a 2 yr old and he stood lower than a yearling bull now a days. In 1967 we went to the Denver Angus show and there too, were the pony-type Angus.

In 1967 we moved to Consul and sold many bulls in that part of the country. The kids got involved in the 4-H Club with showing heifer calves, which was good advertisement.

We took bulls to Swift Current bull sales for a few years where we always placed 1st or 2nd in the Angus division. About that time the Angus Association ROP testing came into being. Weight data was submitted with EPDs also realizing their first usage.

In 1969 the exotics came in. That is when the Angus people woke up and put more height and length in the Angus. We used A.I. with great success. We could breed to the best genetics available in the industry.

In 1979 we took *Jay En Dee Cerelia 7L* to Saskatoon Winter Fair where she was named Champion Heifer, Grand Champion Angus and Supreme Champion over All Breeds. The same year at Agribition she was Champion Heifer and Reserve Grand Champion and at Swift Current Frontier Days she took Grand Champion in the Angus Show. We also raised *Jay En Dee Mandy 49S* which was the mother of Classic, who placed Grand Champion bull at the Iowa State Fair at 7 months old. He garnered a six-figure sale price (mid 1980s). Mandy 49S sold for a five figure price to Shadybrook Angus in Texas (we sold her as a yearling to a group partnership). She is found on the bottom side of S A V Net Worth 4200 and S A V 004 Density 4336.

We used Marshall Pride 1749 heavily in our herd as he was a super bull with good temperament, easy-fleshing ability, good feet and put milk in his offspring.

Our goal with the Angus was to select cattle that grew rapidly with high performance, physical soundness, quiet to handle, easy-fleshing, calving-ease and longevity like *Jay En Dee Blackbird 11W* who lived to 19 years of age and never missed a calving season. *Jay En Dee Eileen 36D* was another cow that contributed heavily to the Delorme pedigrees over her 17 year lifespan. These were the goals that drove *Jay En Dee Angus* in our selection process.

Part of the herd was sold in 1993 to Don, Connie, Darby and Kalee, where *South Shadow Angus* herd came about. Darby's daughters, Isabella and Mackayla are now using *Jay En Dee Angus* as their herd prefix.

A special thanks to *South Shadow Angus* for keeping up with our goals in the Angus World.

*John and Florence Delorme*

If you need a super quiet, structurally correct bull with loads of hair, then you need a 92U son and 165Z might just be your guy. 165Z had huge gains on feed and had the 2nd highest AYW & YW ADG. 69T had an Upward son that was featured in the 2012 sale, and her daughter 904W also had the high selling bull in the 2012 sale. 69T is a moderate yet powerful cow that has the strong udder structure of her dam (25P) and is developing the same reputation for creating the great ones. 165Z has everything going for him, out of a cow family that can't miss.

**DAM: Akita 69T**

**Mat Sister: 904W**

*Our Fall Offering  
of 10 Bred Heifers*

Relatively new to our program are the F1 crossbred Black Simmental/Angus Heifers. In the fall of 2012 we offered our first set of bred Black F1 Heifers. These heifers were the top-cut from our home-raised group. The remaining crossbreds sell as yearlings in the spring with the straightbred Black Angus replacement heifers.

First come ~ first served!

Last year's group sold to the first inquiry.

*These are a fantastic set of females,  
definitely the front pasture type!*

# BLACK ANGUS TWO YEAR OLD BULLS

**BEAR CREEK ANGUS**

Chad Weiss

Home (306) 558-4401 ~ cell (306) 662 - 7060

Maple Creek, SK

www.bearcreekangus.ca

I would like to thank Uncle Donald and Aunty Connie for letting me join their sale again.

These bulls are bred for functionality first and foremost with strict attention paid to feet, udders, and fertility. My program remains calving in April and to ensure maturity, retaining the bulls until two-year olds. As calves, they are wintered on a growing ration then turned out on grass in the middle of April. They are brought in at the end of December and fed tub-ground hay, triticale bales, and screening pellets. Vaccinated with 7-way containing Haemophilus; IBR/PI3/IBR, they've also received magnets and this spring were vaccinated with fusogard (the footrot preventative) shot and the booster. They are ready to go to work.

I'm very proud to offer these bulls and hope everyone will find what they are searching for in their next sire. Please do not hesitate to call or stop by the ranch to view the bulls and our program. Our website: www.bearcreekangus.ca also hosts pictures of the sires and many of the dams. Hopefully we'll see you at the sale.

CBW 34Y

**COMMERCIAL REPLACEMENT HEIFERS**

From the Delorme and Wardberg commercial herds is the 27<sup>th</sup> Annual offering of 80 plus Black yearling heifers.

*Heifers are consigned to the April 18<sup>th</sup> Replacement Female Sale at Cowtown Livestock.*

The Black Cow 'is' our commercial herd and has been since 1948, when Grandpa (Ole) Wardberg brought the first to this area. Yes, a few colored ones have come and gone through the second and third generations of the family, but we seem to get along best with the Blacks ~ the type of cattle that are sympathetic to our environmental and industry challenges. On April 18<sup>th</sup> you'll have the opportunity to purchase from 80 to 100 home-grown Black replacement heifers. This will be our 27<sup>th</sup> annual offering of straight-bred Angus females, all sired by home-raised bulls. *New to our program are the F1 crossbred Black Simmental/Angus Heifers.* These are also sired by home-raised bulls from Darby and Sarah's purebred Simmental herd. Half of the commercial herd are bred to Black Angus sires, the other half, Black Simmental sires. These fancy heifers will equally represent the two breed sire groups. Photos of the Sires, Dams and Heifers are available on our ranch web site.

This special sale features straightbred and crossbred heifers from area producers – please give Cowtown a call about the consignments. 1-306-662-2648

Recommended for Heifers. Moderate framed, square hiped, long spined with that nice old time angus head. Dam is a smaller framed, good footed, Final Answer daughter that produced one of our lead-off heifer bulls in last year's sale. Fantastic females in the family. Here's a bull that should calve easy and make great replacements.

A real moderate, easy fleshing, meat machine with a nice small head. This guy side profiles a lot like his sire, and yeah we are definitely loving him! 134X already looks smoking and he's only 3. 184Z's dam is a fancy, beautiful uddered, 35R daughter that also has a beautiful profile. 184Z did awesome on feed; he had 3rd highest YW ratio at 120! Moderate with pounds to burn – just the way we like them.

Youngest bull in the sale with a moderate birth weight. Strong topped, clean lines, lots of growth. Dam is a long, deep, soggy cow with 36D top and bottom of her pedigree. PGD, 18R has Elite Dam status.

EPDs in the top: 15% MCE

DAM: Eileen 105S

SOD: Dateline 18P

**Herd Management .... the feeding**

'Ranch-raised' is a relative term - Normally the papered herd is running with the grade cattle from July 1 to mid-November. The timing of the two different production cycles, in relation to the seasonal conditions (temperature and wind!) dictate the rations. If we calved-out our commercial herd, in the same, less than elaborate conditions (the calving barn is a wee bit drafty) we'd likely manage those grade cattle the same way as the papered herd. Both herds get the same vaccinations and mineral, neither see creep and the rations, when not grazing, come from the same piles of home-grown feed.

**The feed program for this year's Angus sale bulls:**

OCT/NOV: Free choice long hay

MID-NOV: 16#s Hay, 17#s Silage, 3#s Rolled Barley

DEC: 16#s Hay, 18#s Silage, 4.5#s Rolled Barley

JAN: 16#s Hay, 18#s Silage, 5#s Rolled Barley

FEB: 16#s Hay, 18#s Silage, 6#s Rolled Barley

MAR/APR: 16#s Hay, 18#s Silage, 6.5#s Rolled Barley

..... and a top-coat Mineral Package on ration

**Hay:** baled dryland grass/hay is 55% crested wheatgrass/45% alfalfa.

**SILAGE:** The cereal silage (59% moisture) is an oat/barley mix chopped between the milk and soft dough stages.

Wintered in a 10 acre lot with a hike into the barnyard for water.

**The Performance Information**

As a further means to improve our herd we have submitted animal data to the Canadian Angus Performance, CAP program. The first data was submitted with the program's initiation and along with EPD data offers another tool for our customer's bull selection.

**BW: Actual Birthweight and Adjusted Weights**

**The Elite/Premier Program**

Canadian Angus Elite Cow: has a minimum of five calves, four of which must be registered, to determine her regularity of calving and ability to consistently produce calves with a superior weaning weight year after year, display early puberty, breeding and early calving, followed by regularity of calving and high performance offspring. The Canadian Angus Elite Cow Report identifies superior cows in the Canadian Angus herdbook.

**Canadian Elite/Premier Cow Criteria**

- The cow must be enrolled in the Canadian Angus Performance Program.
- The cow must have a calf with a 205-day weight recorded within the past 18 months.
- The cow's first calf must be born and weaned within 1,000 days.
- The cow must maintain a regular calving interval. (regular is considered to be 365 + 30 days/number of calving intervals)
- The cow must have at least 5 progeny, of which at least 4 must be registered.
- The cow must have an above average weaning weight EPD with an accuracy of at least 25.
- The cow's progeny must all have an above average weaning weight EPD with an accuracy of over 25.

<b>+2.8</b>	<b>+42</b>	<b>+76</b>	<b>+18</b>	<b>+39</b>	<b>+2.2</b>	<b>+5.4</b>

**How To Read EPDs and Performance Data**

EPD's are a measure of the expected differences in performance of a sire's/dam's progeny when compared to the average progeny of all sires/dams evaluated within the same breed. This prediction is based on actual performance, progeny performance and relatives' performance.

- ~ EPDs *can* be used to compare bulls/cows from different herds.
- ~ EPDs *cannot* be used to compare bulls/cows of different breeds.
- ~ EPDs allow breeders to estimate a young animal's breeding value and that animal's value as a parent
- ~ EPDs allow a fair comparison of breeding value by removing environmental bias such as climate, feed and special management
- ~ EPDs are the best tool available to compare animals between herds, countries and year of birth
- ~ EPDs help breeders make informed decisions regarding breeding stock selection by evaluating numerous traits, such as growth related traits (BW, WW, YW, Milk)

Interim EPDs - are indicated by an "I" preceding the EPD value. Interim EPDs are available for animals that were not included in the National Cattle Evaluation. The accuracy of Interim EPDs is generally indicated by a 5% percentile, as there is less data used to produce these estimates. A pedigree estimated EPD (PE) is the average of two parental EPD values (½ sire, ½ dam).

- BIRTH WEIGHT (BW): The birth weights of a bull's/cow's progeny when compared to the breed average, in pounds. Negative values indicate lighter BW while positive numbers indicate heavier.
- WEANING WEIGHT (WW): The adjusted weaning weights of a bull's/cow's progeny when compared to the breed average, in pounds.
- YEARLING WEIGHT (YW): The adjusted yearling weights of a bull's/cow's progeny when compared to the breed average, in pounds.

*continued...*

## EPD INFORMATION

- **MILK:** A measure of the amount of pre-weaning performance gained by calves which can be attributed to the milking ability of a bull's/cow's daughters. The EPD is expressed in pounds of calf.
- **TOTAL MATERNAL [TM]:** Indicates the performance based on the calf's inherent genes for growth (WW EPD) and the influence of his mother's milk EPD. It is an indication of the weight of calf a bull's daughter will wean.
- **CALVING EASE DIRECT (CE) EPD** – the average difference in ease with which a sire's calves will be born when he is bred to first calf heifers.
- **MATERNAL CALVING EASE (MCE)** – is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.
- **ACCURACY (%)**: the reliability that can be placed on the EPDs.

An accuracy of close to 100 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

Low accuracy = less than 40

Low to medium accuracy = 40 – 60

Medium to High accuracy = 60 – 80

High accuracy = greater than 80

EPDs / Accuracy							AOD
BW	WW	YW	MILK	TM	CE	MCE	
+2.8 61%	+42 48%	+74 45%	+17 21%	+38	+1.8 39%	+5.0 15%	10

Accuracy is the measure of reliability of an EPD. Higher percentiles, indicate larger amounts of available information and greater certainty that a bull's EPD will not change significantly as more progeny information becomes available.

The Possible Change table, can help a producer determine the involved risk associated with an EPD by considering the possible change value for each trait at various accuracy levels.

For example, an animal with an accuracy of 10% can expect its BW EPD to change  $\pm 2.4$  pounds, whereas an animal with an accuracy of 80% can expect its BW EPD to change  $\pm 0.5$  pounds.

Accuracy values should be printed in sale catalogues. Without an accuracy level, you have no way to gauge how much that EPD is likely to change as that animal gets older and more information is available on it.

### BLACK ANGUS — POSSIBLE CHANGE TABLE

Accuracy %	BW	WW	YW	Milk
100	0	0	0	0
90	0.26	1.16	1.70	0.97
80	0.53	2.32	3.40	1.94
70	0.79	3.48	5.11	2.91
60	1.05	4.64	6.81	3.88
50	1.31	5.80	8.51	4.85
40	1.58	6.96	10.21	5.82
30	1.84	8.12	11.92	6.79
20	2.10	9.27	13.62	7.76
10	2.36	10.43	15.32	8.73

Generally ... accuracies above 50% are available (earned) by having progeny in large numbers (ex: semen sales) or a consistency of pedigree/related matings (ex: line bred programs). Females producing well into their teens will also earn a higher accuracy value.

### HOW TO USE EPDS

EPDs can be useful tools when planning breeding programs, however, remember that they are not perfect or absolute. EPD's are a measure of the expected differences in performance of a sire's/dam's progeny when compared to the average progeny of all sires/dams evaluated within the same breed. This prediction is based on actual performance, progeny performance and relatives' performance.

... and correlations of the traits a breeder wants to improve upon within the herd. Some traits are more heritable than others, resulting in swift progress being made in comparison to other less heritable traits.

Attention should be paid to the heritability:

Trait	Heritability Range	Level
reproductive	less than 0.20	low
growth	0.20 – 0.40	moderate
carcass	greater than 0.40	high

Also, many traits are correlated meaning that the expression of one trait is related to the expression of another trait. The correlation between traits can be either positive or negative and close attention should be paid to these relationships, when developing selection criteria in a breeding program.

Understanding the heritability and the effects of correlation between traits will aid in developing a genetic selection program that will optimize improvement on desired traits while minimizing undesirable side effects.

## HOW TO USE EPDS IN SIRE SELECTION

Each individual breeder must set his own selection goals, based on the needs of his operation, the situation for that trait in his herd, and his production environment.

It would be easier if we could assume that the highest EPDs are the best. Unfortunately, it isn't that simple. Like most decisions, using EPDs for sire selection involves tradeoffs. For example, bulls with high growth EPDs may sire calves with a higher birth weight as well. And there may be other impacts on your operation to consider.

For example, when breeding heifers it is desirable to produce calves with lower birth weights, so a breeder may want to pay special attention to birth weight EPDs of prospective bulls. If all calves were sold as feeders, the milk EPD would generally not rate much attention. Yearling weight will be important if you want to ensure finished steers in the appropriate weight range.

It should also be kept in mind that reaction to selection can differ from trait to trait. This is because some traits have higher heritability than others, and are more easily passed to offspring. For instance growth traits such as weaning weight respond faster to selection, than reproductive traits such as age at first calving.

A balance of traits is required, and the perfect balance for you will depend on your climatic, nutritional and economic environment, as well as the management goals you have set for your herd.

One way to select for several traits are to set minimum and maximum acceptable levels for each trait, and then choose sires that meet criteria. Another method would be rank all sires, on each trait, then develop a weighted index which ranks each bull from one (most desirable) to five for each trait. The bull with the lowest total score would be your first choice.

### A SAMPLE SIRE SUMMARY EVALUATION

Bull	BW		WW		YW		Milk	
	EPD	Acc.	EPD	Acc.	EPD	Acc.	EPD	Acc.
A	6.6	0.75	31.3	0.75	39.5	0.68	-5.6	0.58
B	0.1	0.82	14.6	0.83	24.6	0.80	6.0	0.73
C	0.0	0.89	0.3	0.89	11.1	0.88	18.9	0.87
D	-5.9	0.87	-3.8	0.87	-14.4	0.86	10.3	0.85

**Producer 1** is looking for a sire that can be used on heifers; he wants a bull that will produce low birth weights and he wants to keep some heifer calves as replacements. Growth performance is not his first priority. The sire that fits his needs is sire D. He has a low birth weight EPD and above-average milk EPD.

**Producer 2** has a sound-breeding program; he is looking for a sire that will maintain performance and milking ability. He will select a bull that will increase growth performance and milk while maintaining calving ease. Sire B is his choice.

**Producer 3** has a herd of above-average-frame cows and is not planning on keeping heifers as replacements. She is looking for a bull that will give her the most profit at weaning. Sire A will give her the best result in weaning weight. If heifers are kept as replacements, they will, on average, be inferior for maternal milk.

**Producer 4** wants to maintain his calving performance and growth performance but would like to increase the milking ability in his females. Sire C is his choice.

*Up and Coming Junior Herd Sire for first service in 2013*

A thick, moderate-framed and very attractive Density son that should compliment our breeding program. His Dam, 25P produces progeny that have natural thickness and lots of style. All of her daughters have been kept and are following in her footsteps ~ functional females with great udder attachment and teat size. With Density as his sire, he should provide a potent maternal punch as Density is known as "the cowmaker". We believe you have to have a good cow to raise a good calf.

**DAM: Akita 25P**

**SIRE: Density 4336**

With EPDs in the top 10% BW, 20% WW & YW, 15% CE, this very docile bull could have a huge positive impact on any herd.
